Use of the apostrophe as a plural designation is rapidly becoming passe'. IIRC it already is in the UK.

Possessive is the new standard.

I get my chops busted if I write with say last year's work instead of last years work.

I don't understand.  Possessive is the new standard?  Your chops get
busted whey you write "last year's work"?
That IS possessive.

Is it? I've always wondered.   Does the work "belong" to last year?
Does last year "own" the work? It's *my* work that was done last year.

Curious,

// marc

This is based on the mistaken assumption that ComCrap even cares.

Their "abuse" department seems to exist solely to make sure that ComCrap's clueless (L)users, their machines crammed full of spammer trojans and spyware and thus turned into spam-spewing zombies, can abuse the rest of the 'net to their heart's content.

You don't have to take my word for it. Just ask around in news.admin.net-abuse.email. Alternatively, have a look at spamhaus.org, and see how many active listings ComCrapTastic has.

Keep the peace(es).

1. Too bad you have to work for/with people like that. " ... last year's work" is correct. The possessive does not exclusively denote ownership. It also denotes the "of or pertaining to" relationship, as in "Cleveland's bus system."

2. I just went to the McGraw-Hill Learning Center

http://highered.mcgraw-hill.com/sites/076743000x/student_view0/chapter1/apostrophes.html

and took their apostrophe quiz

Results Reporter

Out of 17 questions, you answered 17 correctly, for a final grade of 100%.

17 correct (100%)
0 incorrect (0%)
0 unanswered (0%)

Here's the most interesting one:

Last years womens softball team is much better than this years. [The stem omits apostrophes.]

C) Last year's women's softball team is much better than this year's.
Feedback: Correct!

3. Despite the absolute correctness of the apostrophe for the plural of numbers and letters, I see a lot of acronyms and abbreviations made plural by the addition of an "s" without the apostrophe and I don't flinch. I think the language is evolving regarding acronyms, which, after all, are less than 100 years old. Therefore, I vote to accept "SWRs."

73,
"Sal"

my God man- get a fucking LIFE- use your email software program to
create a "delete at server" or a "blocked sender" list, and put the
guy's email addy in there, and you don't have to read his posts
anymore.  You self-appointed "spam cops" create more havoc on Google,
than the worst spammer that lived.

I have a life, thank you. As far as "Google", I guess that you're too retarded to notice that I'm on Usenet and "Google" is hijacking my posts to show on their crappy HTML interface.

YOU need to get a life and stop whining about every rule you don't like. USENET has always been self policing. Newsgroups that don't, end up as useless dumping grounds for spam that no one reads.

For instance, its considered to be very low life to keep changing your screen ID, and against the TOS of most ISPs. I'm tired of creating new filters for your moth eaten ass, boy.

yes   at least to me   "last year's work" as opposed to some other
"year's work"  pretty sure that's possessive

Check out the Diamond SRH320A. I have one and really like it. Does transmit on all 3 VX-6 bands plus offers very good receive on six other bands such as public service, aircraft band, etc. Transmit antenna is 1/4 WL on 2 and 220, 1/2 WL on 430. 35 cm tall, very light, flexible, well finished. Somewhat pricier than others, but looks like it will last forever. SMA connector.   Craig   AC0DS

A year is an it. Is it possessive because it's its work?

Everybody is correct and everybody is wrong.

According to Turabian's "A Manual for Writers", plurals of most single
and multiple capital letters used as nouns are formed by adding "s"
alone. Example: SWRs
Form the plural of small letters, capital letters with periods, and
capital letters that would be confusing if "s" alone were added by
adding apostrophe and "s".

Now, everybody, back to work and mind your p's and Qs

I've seen his stuff listed for YEARS. Same M.O. Same dogs! Nothing
under $9.99 everything "cheep" "neat-o" so he sez esp when it is
nearing the end of the auction and he does not think he is getting
enough for his items. He must hit every ham estate sale in the area.
Was a much bigger Ebay whore when he was in New York.

Here are several instances of the TS-2000 being compared to the
Kenwood 850 and other rigs.

1

http://www.eham.net/forums/StationBuilding/2065

2

From http://www.eham.net/reviews/detail/1249?page=2

W5AK   Rating: 4/5   Oct 23, 2005 21:15

Very Average Radio   Time owned: 3 to 6 months

I have compared the TS-2000 against the TS-850 so many times that I can not count. On CW, the radios are not even close in weak signal reception. The TS-850 is clearly better. I use the TS-2000 on 6 meters and it's OK. Deaf on 2 Meters without an external preamp. When I read these reviews, it makes me wonder whether you have the same radio. I use a high end transverter and TS 950SDX on 2 Meters and the TS-2000 is so far below this rig that I took the it off line. I was really dissapointed! I'll keep it here in case the next satellite actually works. Otherwise, it's going to stay on the shelf where it belongs. This is a really average radio that is below 4 but I feel kind tonight.

3

http://www.eham.net/reviews/detail/1249?page=2

N7BUI Rating: 3/5 Oct 23, 2005 16:06

OK rig, but probably won't keep it. Time owned: 3 to 6 months

As much as I'd like to continue the drum beat of how wonderful this rig is I just can't. I have enjoyed its HF ham band SSB/CW operation but on AM reception this thing is the pits. Some will probably think that this is a minor point. But if you use your radio mostly for general SW reception like I do you would understand. While tuning the SW AM bands this rig has an annoying "pop pop" noise as you turn the knob through stations (AGC?). Opening the DSP wider helps, but then you have to put up with hetrodynes every 10Khz. There doesn't seem to be a happy medium of DSP/AGC/RF gain. Tighten the DSP and the "pop pop" is worse and fidelity is garbage. My Yaesu FT-857D is a much better receiver for SW. That combined with the very strong birdie on UHF, this thing might be going out the door. I don't think I should have sold my FT-847! On its plus side, the dual receiver feature is great, the SSB operation is excellent, and on UHF/VHF FM it works great. I have used the �Sky Command� with my Th-D7 and it is a neat feature. But don�t let all the bells and whistles blind you to some of the issues this radio has.

4

Long http link. You'll proaby have to copy and paste it back together.

Yes I heard the 2000 is quite deaf and the voice compression sucks
among
other things. Perhaps Kenwood should have concentrated on the
functionality
of the radio rather than the whistles and bells

There are other comparisons if you search the net.

I am trying to help someone out who is currently cruising and can not contact Furuno. THey are trying to use their FS1503 on lower sideband but there is some 'unclipping' procedure required to enable lower sideband. Does anyone have the details on this procedure? They seem to think its a keying sequence on the controls. I'm pretty sure there is a jumper which needs to be clipped.

Any help would be great.

Thanks!
-patrick

I knew I read this review somewhere but I did not find it until after I posted the previous message. Here it is...

=====================================

From http://www.eham.net/reviews/detail/4?page=5

AA8VL   Rating: 5/5   Dec 5, 2002 11:07

SIMPLY THE BEST DARN RIG--THE AUDIO REVOLUTION   Time owned: more than 12 months

First off, I have used many of the high end radios out there. I thought the best rig for me was the Kenwood TS-2000...so I bought it!

Bought a TS-850S/DSP-100 for backup and WOW! Sold the TS-2000 and bought another TS-850/DSP-100.

The audio on transmit and recieve is AWESOME! Just stock out of the box without the optional DSP-100. With the DSP-100 the Kenwood TS-850 is simply an unmatched rig for the competition. I have never yet seen a rig in the price range of this one that is able to produce such sweet TX / RX audio!

If you buy a TS-850S be on the lookout for a DSP-100. You will not regret it.

I will never sell my TWIN 850's! PERIOD! It's love baby!

Patrick,

According to the Furnio FS1503 manual,   found at:

http://www.furuno.com/Furuno/Doc/0/LUF7IRLV4T841D2D338M1UFA54/FS1503
+Operators+Manual+Version+C.pdf

The Mode key selects the class of emission. Each press of the

[Mode/1] Key steps the emissions selector through a selection of several modes, LSB*, J3E (USB), AM, TLX, and FAX.

However, please note that the first selection of LSB is marked with an asterisk and is indicated as "available with system setting by FURINO authorized service agent." This would indicate to me that the LSB setting is therefore only available as a choice after the radio has been modified by Furnio service tech.

In case anyone is interested, the answer from Icom Tech Support....

"The IC-746 does not use a memory battery, it has non-volitile memory."

Thanks to all who replied.

I have a Dentron MLA 2500 that runs the now obsolite 8875 ceramic tube and I'd like to know if there are any other tubes that are pin compatible with these?

Thanks,
Mitchell

The new Kenwood 480-series transceivers are getting pretty nice
reviews on eHam.net. Good review in QST, too. Sorta ugly, but I'm
tempted, myself.

The AM selectivity is terrible onthe 480x.

-6db at 5 kHz
-60db at 40 kHz!

That is going to suck when you tune to listen to shortwave broadcast

..and it is ugly.

Light blue letters on a black back ground is easier on the eyes than
black letters on an orange back ground.

What good's a hat if it don't keep the antenna dry?   I think I'll keep it though, for some odd reason my SWR's are better.

*********** REPLY SEPARATOR ***********

Your priorities are skewed. Since there are only so many hours
allotted to us, what would be a better way to spend your spare time:

1. Learning morse code for the above mike-failure scenario?
2. Stocking up food, water and ammo for the above mike-failure
scenario?

You have been reading too many stories of the valiant radio op on the
Titanic. Ain't gonna happen.

Bill, W6WRT
20 wpm Extra, but realistic about it

*********** REPLY SEPARATOR ***********

Your CB origin is showing. "Ham" is an adjective, not a noun. One does
not "get into ham", one "gets into ham radio".

10-4?

Seems the bullies are not all on SSB after all. Didn't the
Titanic's CW operator bully the California's CW operator to
such an extent that he turned off, turned in, and the rest
is history?

Gee, Bill. That's mighty specific. But since you brought it up. "Ham"
can be used as a proper noun: "I'm a Ham". Not everyone goes to the
trouble of saying "ham radio operator".

It's also a sandwich.

Not really, but I'm not in a mood to argue about stupid shit - anymore.
Actually, I could care less. My ham days are few and far in between due to
all the ass holes on there ruining it for the rest of us. Maybe you're
right......... the code really didn't keep the crud off the radios. Hell,
why even have a test at all.

For Sale: BEAUTIFUL, rare, black front Yaesu FT-107M. (Most were white.) 10-160 meters. 240 watts input. Two extra crystal sockets for WARC bands. 12 volt rig, so it can go mobile. Fused power cord, YM-37 microphone AND brand new Turner noise cancelling mic which works and sounds fantastic! CW wide/narrow filter. Original box, schematics, parts list, instruction book, even warranty card! Outside appearance: very good to excellent! Front panel of rig: mint! (Photo available at QTH,com under RADIOHF) First $450 takes it! (Plus $19.95 towards triple box shipping and insurance.) First e-mail gets it! wa8mea@hotmail - PayPal available as well as Visa/Mastercard through my ham business.
73, Bill Lauterbach - WA8MEA - http://HamRadioFun.com/

Who ever is designing the face of Kenwood's latest batch of ham
radios must wear ugly clothes, drive an ugly car, live in an ugly
house, and be married to an ugly woman, because only if you were
surrounded with alot of ugly things would you think those Kenwood
radios looked good.

Time to hang up your ticket I guess. We are all assholes, and you are
the only "true ham radio operator" left. Go play with yourself.

For conventional Spectras? Heck, Motorola will sell it to anyone willing to sign their Draconian software licensing agreement. Last I looked, conventional Spectra software was down to about $175.

Keep in mind, though, it's not just the software. You also need a RIB (Radio Interface Box -- anywhere from $25 to $100, depending on where you get it and which one you get). Programming cables for the Spectras are easy enough to make.

Worst case (shameless plug alert), there are guys like me who specialize in conversion of such radios to amateur service, and have all the tools necessary for programming and checkout. ;-)

Happy hunting.

Nah, not all of "us" or "you" in the case of your statement. I'm just saying a lot of crap is going on - on the bands today and its not worth even earning a ticket for - anymore. Ham radio and yes, even CB - used to be respectable at one time. How times change. Its hardly worth turning on the radio anymore. Especially on say 10 and 80 meters. But back to "your" statement, there are still "many" decent operators on both the Ham AND CB bands - out there. Ya just got to pick through the rubble to find them sometimes.

And NO, I"m not the "ONLY" "TRUE" Operator left........ Don't put words in my mouth, I certainly didn't place myself on any pedestal. Again - there are LOTS of decent operators out there. I didn't say "ALL" were bad - but there are - you have to admit - quite a few bad ones. Its gotten worse in the past few years.

I don't sign with my call. Some like to - that is their choice. But even if
they didn't - wouldn't give me any reason to doubt them being licensed.
"Posting" a call sign doesn't prove a thing. "I" for one - am NOT going to
go running to the FCC database to check your call or any other to see if it
is legit. I don't care........

8873, 74 and 75 are not only pin compatible but electrically as well.
Of course only the 74's can be found and they are "expensive. They are
axially cooled just like the 4CX-250s so it'd take modifying the
system to pressurize the tube socket area to get suficient cooling.
The 8874's do have 400 watt plate disapation if you put enough air on
them.

The 480HX might be ugly, but its the best HF mobile rig I have ever run.

Yeah, and I've had these two left handed pipe wrenches around for
years.  This southpaw found them indispensable on galvanized, but can't
seem to get them to work on copper pipe.

When I reached my first duty assignment in the USAF I was sent on a fools errand to get 1000 yards of flight line. When I got to the place I was suppose to pick it up I told the guys there that I knew what flightline was but I had an idea for a joke on the guy that sent me down there.They were very happy to help. We went out back of the base and loaded up a truck with rubble from flightline construction then took it back and put it the POV pickup of they guy who had sent me out. When I went back to the shop I told him I had the flightline but didnt think I had the thousand yards he had requested. This got him and everyone else in the shop curious and they all wanted to see what I had brought back. Thats when I told him to go look in the back of his pickup.

I don't know where you are getting your reviews, but on e-ham, the TS 2000
is the second most reviewed HF transceiver with 279 reviews and an average
rating of 4.6 out of 5.0.  (the Icom 706, all flavors, has the most at 334
reviews.)  The TS 850 has 79 reviews with an average of 4.7 out of 5.0.  Not
much difference and a much smaller population in the data set.  I'd say the
2000 is holding it's own as far as user reviews go.

Oh yeah...Justin Case of WHAT??

Most of you know what this radio is and does. The radio has three modules installed,
2m, 220 & 440.

PAY ATTENTION HERE: The radio works perfect in every respect except that about a month ago the back light started going on and off on its own. It would stay
on for a day and then turn off. Then eventually it stayed off.

I reset the unit to factory specs just in case I may have messed up a setting or something
but that didn't do it. The readout is there and you can see it fine when it's daylight or if
you shine a flashlight at it at night.

I already upgraded so I'm selling this to offset the cost of the new one.

Unit cames with DTMF mic and power cord. NO mounting bracket.
I don't have the manual either but you can get it on ebay or on the web somewhere.

Price: $230 obo.   Don't be afraid to counter offer but, don't get crazy.

Remember, this has three bands in it. Not like the other tribands
that are being sold for more and only have two modules installed.

What are SWR's? Does your antenna have multiple standing wave ratios?
Were they sick? Did they have MPD? Do you SWR's look in the mirror each
morning and say "well, who are we going to be today?"

Does the standing wave ratio own something called "are better"?

Are SWR's related to 73's, and if so does the hat help 73's also? Is
your antenna still a fertile female that gets wet whenever a large
capacitance hat climbs on top?

A local school had "Spelling Award's Day" on a sign out front. When I
saw a pamphlet, it said "Selling Awards' Day".

Maybe it was award's for selling extra 's as a school project
"SWR's" and "73's" , or should I s'ay award's for s'ellin extras'

s'sses ?

73's and Happy SWR's to all,
Tom's

Does anyone know how to get this radio into the alognment mode?

I have a copy of the technicial supplement and I have the knowlege
and access to the test equipment necessary to realign the radio,
However, I have not been sucessful in geting the radio to go into the
alignment mode.

I tried to place the radio into alignment mode as described in the
technicial supplement but it will not work. When I hold in the MHZ[PRI]
and Hyper Memory [5] keys and turn the power on the radio displays
F-1 in the upper left corner and SETRST in the display. [According to
the operators manual this is supposed to happen if you hold in the
MHZ[PRI] key while turning on the power] The next step in the manual
is to press each function key in order, left to right, starting with
MHZ[PRI] and ending with S.SCH[ARTS} then press and hold the [88]
key until "A-0   REF.xxH" appears in the display.
Pressing these buttons as indicated and holding the [88] key in causes
the radio to beep once after about 1/2 second.
But the display does not change from F-1 SETRST

I sure would like to hear from someone who has been able to get thier radio
to go into the alignment mode.

Thanks
Stuart

You failed to mention the Kenwood TS-950SDX.
I have two of these and they out perform my TS-2000
and Icom Pro III, although it is hard to beat the Icom monitor.

Methinks your leg was being pulled.

The SWR with the apostrophe s is a grammatical error. The apostrophe s indicates that the SWR is possessive, that the SWR owns something; or, that the SWR is doing something. The apostrophe s is not plural!!

The plural, multiple, SWR is denoted SWRs.

Kenwood TS-430s HF Tranceiver in good conditon. Bought it used a
couple of years ago and use it on SSB and CW. Good output and great
audio qualities. The radio was repainted by a previous owner but looks
nice and meets all my needs but as many of us I have extra radios that
need to find new homes. There is a slight dent on the top panel and
some pitting on the rear panel. Radio includes the optional two
filters: YK88CN (narrow cw filter) and the YK-88A (AM filter) Also
included is the mobile microphone, and a copy of the manual.

Take a look at the detailed photos I've posted to:

On the contrary, the plural of the letter A is A's. The plural
of the number 3 is 3's. It's not too much of a stretch to assume
that the plural of SWR is SWR's.

From Webster's: "apostrophe - a make used to indicate ... the
plural of letters or figures."

For me, it's the application, the overall quality of the radios involved, and how self-repair friendly it is. Price is about third or fourth down on my list of considerations.

Part of the issue is that I'm an engineering tech for our state's patrol agency. As such, I have need for radios that are legal to use on commercial frequencies (as in Part 90 type accepted) as well as amateur repeaters.

Motorola Spectra units filled the bill nicely. Durable, programmable, reasonably inexpensive on the used market, simple to operate once programmed, and perfectly legal for both Part 90 and 97 operation.

For HF, I usually go after the best I can possibly afford in terms of retired commercial gear. Sunair, Collins, and Harris are all favorites of mine.

I'm not keen on most of the dedicated amateur gear manufacturers because you practically need a microscope to even see the components on the circuit boards, let alone service them.

Keep the peace(es).

How do you send a 'dash' by tapping on a pipe? You
apparently could revolutionize prison communications
by providing an answer to that simple question.

no store within 300 milesof me... I watch the hamfests, and know what suppliers will be there (I prefer Memphis Amateur Supply), I will call them and give them a "shopping list" for the hamfest... I pay the hamfest prices, don't pay sales tax or shipping. I got a TS-480HX for $900 like that. Its also a good idea to peruse the other suppliers web sites about 3 weeks before Christmas for sales also... Got 3 Yeasu FT-7800R dual banders for $225 each, and free shipping to boot.

I seem to remember that the original Morse code was all clicks. I think the telegraph lines were DC current to electromagnetic clicking "receivers". The dashes were sort of implied by the spacing of the clicks...not that it matters to the antenna group, I guess.

The only thing good about the prison system of taps mentioned earlier in the group is that if you know the grid, you know the "code". Extremely inefficient, however.

Long live di-dah

Yes. It was an episode of the old Adam-12 TV series. Patrolman was injured in a crashed cruiser. Mic out. but he could click the mic button...the guy on the other end directed him to "click once if you hear me and twice if you don't"

Classic television: you had to be there.

How about a fast double tap on the pipe (or bar) to signify a "dash"? It's not an elegant solution, but could be made to work. Those guys are probably not gonna try for 30 characters per minute anyway.

Harold

Hello,

You wrote it Paolo, it's a CB rig and will always be it.
You should better invest in a real amateur rig, even low end, like an IC-718
TS-50s or Alinco DX-77T and keep your Uniden to monitor 11m or the beacons
on 28.200.

73 de F8BOE Olivier ...-.-

Hello,

Even for experimenting it will be a big amount of work to acheive it without
butchering the rig... You'll need a lot of knowledge and an HF workbench to
realign all the circuitry after Xtal swap and Eprom programing.
It can also be acheived by replacing the local oscillator by an external
VFO. The biggest problem is getting a clean and stable rig with a basic rig
that lacks both quality and good electronic design.

All is possible, but if I were you, I would rather spend my time and money
in homebrewing the entire transceiver from ground up. There are many
interesting mono/multiband and QRP projects around.

Not having a store anywhere nearby, nothing is nearby in Northeast Montana,
I not only need a good price but a place that can service what they sell.
Have always had good prices and great support and service from Burghardt's.
They always seem to have what I need, new radio or parts for older stuff.
Terrific staff that is always willing to answer questions or give advice.

Just my two cents worth.

Hi Bert,

For the small stuff (books, coax, replacement whips for my HF mobile antenna, etc) I buy from our local store, Texas Towers. For the big stuff, to avoid paying 8.5% sales tax, I shop the 1-800 numbers and web sites. I generally end up buying from Ham Radio Outlet (low price, excellent service, and free shipping on orders over $100). I bought an Icom 756 Pro 3 earlier this year from Marc's Amateur Radio in Florida for $2,850 (best price I could find that week). If I'd bought that rig locally, the sales tax would have been $242! I like to support the local shops, but the tax is a killer. Besides, stores like Texas Towers do a lot of mail order business from people like me in other states who don't want to pay their local sales tax. They aren't hurting in that regard.

73,
Dean K5DH

Now, that's an interesting piece of info because it's the 756ProIII
that I'm looking at.

I'd checked every on-line dealer that I could find and every one that
advertised a price on line (almost all do) showed exactly the same
price of $2999.99, although a few didn't explicitly mention free
shipping.

I'm in no hurry, so I guess I'll search harder :-)

Bert,
Wait for a hamfest to come around, find out what suppliers from out of your state are supposed to be there, call them and give them your shopping list. They should have it at the hamfest for you. no shipping, no tax, and the "discounted" hamfest price. :-)

For me, bigger is better -- I figure they got big for a reason.

Amateur Electronic Supply in Minneapolis ships promptly when I put an order in -- I get the gear in days.

They pack it well; nothing's ever been broken.

And when I recently bought a $300 antenna tuner that did not perform as I had hoped, they took it back, minus 20% restocking.

Besides, they also put out a gorgeous catalog that's free.

The local guys, besides the sales tax there, they don't advertise their prices on anything, and don't appear to keep anything in stock. So why let them mail order stufff for me, and add on the state sales tax? Doesn't make sense.

Wasn't there a strong click when the receiver circuit
closed and a different weak click when the circuit
opened? The length of time between those two types of
clicks was either a dot or a dash?

The first Morse machines scribed the dots and dashes on a moving strip of
paper. Operators of the day found that they could decode the sound of the
scriber by ear, so the scribing machines were scrapped.

The problem with this joke is that the wrench exhists. Handedness in a wrench is determined by which thumb closes the jaws. Right thumb right hand wrench, left thumb left handed wrench.

I have a left handed crescent type wrench. Where was it made?
POLAND of course.

Wrench available for inspection.

Dear Kenwood,

I've been reading all the reviews on your current ham radios, and one thing repeatedly comes up in the reviews. The Kenwood TS-450s is reported to be better than the Kenwood TS-570x, and the Kenwood TS-850s is reported to be better than the TS-2000. As a matter of fact many of the reviews have said the TS-2000 is down right deaf when compared to a Kenwood TS-850s, TS-870s, ICOM 746 Pro, and Yaesu Mark V.   I looked at the Icom radios, but I thought they were ugly.   The Yaesu radios have too many reported trips back to Yaesu repair, the Ten Tec Orion II is too expensive, so that leaves Kenwood. I can buy used, but it would be nice to have a new TS-850s. I've got the cash, the desire, and the will to spend, but you currently don't offer the radio to get my dollars.

Sincerely,

A U.S. Ham.

At 23, I took a job as a young engineer at a place that had previously been a gyroscope manufacturer. As the new guy, they asked my to deliver a briefcase to the boss' office and (you guessed it) there was a spinning gryo in the briefcase. I got a big surprise when I tried to turn a corner in the corrider and the briefcase kept going straight ahead! A great 'new guy' trick.

It's true, that mid-range transceiver is getting rare.

I always wanted Ford to reissue the 1964-1966 Mustang. Can you imagine how many they would sell !

As a used alternative, take a look at the Icom 746 (non pro). Lots of features. 850 owners speak favorably about it. Read the 20 pages of nearly unanimous positive review at eham.net reviews

I worked in a shoe store as a teenager.

The newbies were instructed to get the wall-stretcher from the backroom
when there were too many shoes to put up.

I have a HeathKit SB200 (80 - 10) unmodified Amplifier, that is in excess to my needs. Works (no book).

$300.00 - Prefer local pickup in the Frederick, Maryland area.

Our local police are talking about getting all new radios "real soon now", which means their old ones may become available.

But can we ordinary peons get the programming software?

A friend of mine and a high school classmate got caught doing the same thing. Some very creative descriptions of the teachers' extracurricular activities, until one of the teachers turned out to be a ham...

Showed them the piece of paper he was copying on :-)

Works great all bands and unused very little since new. Was a RACES unit that ran one net per week for 4 years then has been mine since. I never use it. Comes with original manual, and Shure mobile mic. I think one foot is broken off.

Asking $1100 plus shipping and insurance.

Contact me direct al(dot)last@sbcglobal.net remember to drop the (dot) and add a .

Thanks, Al Last W6GSQ

Passing notes in school is how I first learned the code. Took about two
weeks to memorize all the letters so I didn't need a cheat sheet.
I never got caught though. :/

No.
I know a fellow who works in Tech support for a big computer company
who says they get questions likes this all the time.

There are several reasons the product has failed to meet your
expectations.
1- you have likely installed it upside down.
2- Your antenna is defective, the product is not meant to be used with
a defective antenna.
3- Exposure to weather has nullified your warranty.
4- There is an improved replacement product available and you may wish
to upgrade at a special price.

Or send the new guy in engineering to supply for a pressurized
container of Dihydrogen Monoxide.

Or send the new finance guy to get the difference finder.

FS Collins KWM-2A Transceiver
Needs work.  Plugged it in and lights up and no receive or transmitt.
I looked inside, and see no crystals in it. It's a fixer upper or
parts radio. Cabinet needs repainting,etc.
All parts are in it. Don't see anything missing, other than crystals.
Make offer or let me know what you have to swap for it.
Remember AS IS, Don't work.

Which of your trucks were you thinking of updating? Your old rust bucket
truck that still runs, or the one on blocks that you call your base
station?

You should go for your license.  The additional privelages are quite
worthwhile.  I will warn you that there are still quite a few inbred
hicks that got their ham tickets, unfortunately.  The good thing is most
of them seem to be extra class, and are mostly older and will be gone
soon.  It's a leftover effect of requiring Morse ability as opposed to
operating knowledge.

The problem with the newbys with nocode techs is that they don't realize
that knowing the code is just as important as knowing how to press the
on/off button.

Go here and download the free program MMTTY.

http://www.muenster.de/~welp/sb.htm

Set it up so your receiver is in the LSB mode, 170 hz shift, 45 baud (60 WPM).

Start tuning around 14.080 to 14.100 MHz.

There are lots of other sound card programs on the same site for other
modes, but the MMTTY seems very easy to get up and going.

<X-Post canceled>

Replace?? no..........get licensed, *ADD* the HAM radio... start with V/UHF
dual bander, then as $$$$ and space permit, add an HF rig..... maybe a
TS-480
In my truck I run a CB, a dual bander, and an HF rig. The CB keeps me out of
trouble, and the ham rigs give me something to do.

That is a very good point that I never considered. In thinking about it,
it makes perfect sense. "Mode Welfare" - too funny.

Uh, yeah.  Kind of like requiring mastery of the buggy whip for
prospective car drivers.

I don't think you can really expect the newbies to want/desire to know that which they know may be being phased out soon. Why worry about learning it if they know it will soon be gone?

I am of the opinion that a 5 WPM at least - should be kept on as a requirement - as someday - it may be needed. Think not? Say you're in the midst of an attack - of terrorism, a war on our homefront OR a large scale natural disaster, a microphone isn't working or available. You can key the radio but don't know code - now what? With code, even at 5 WPM - you could get some very important information to those needing it to help save you - to them. You could tell them WITH code, what is needed, exact whereabouts, how many people involved, etc........ Just clicking a mic pin with a wire won't tell anyone anything and could delay any help or a response big enough to do much good. In these times with the large scale disasters as we've seen and attacks - even for any said to be planned, NOW is a good time to WANT to know code. IT may save you........ It is one of those skills you learn - just like CPR or whatever - you hope you never have to use, but you're glad you have it - when you need it.

5 WPM is NOT hard to learn or do. ANYONE with any interest can learn it in a

month at most if you take x amount of characters a day and start using them. Many learn it sooner but it shouldn't take more than a month to get to 5 WPM. "I" know how I learned it but my method won't work for all, just as others didn't work for me. But the main thing is, you must "want" to learn it. If you were 16 and didn't want to learn to drive a car - plain and simple your driving days would be non-existant or very short lived at best- point being MOST 16 year olds WANT to learn to drive. YOU HAVE TO WANT IT.

Many of you may have heard of the Quecreek Mine incident in PA some time ago. A pipe was drilled down into the shaft. Those at the surface heard 9 taps on it, signifying there were 9 miners there. NOW - if any of those miners KNEW code, they could have gotten a message to the surface as to what conditions were exactly, the extent of injuries as best they could, etc. Maybe even instructions to help those on the surface plan their moves a tad better. Luckily, the 9 were saved but that is an example of just those 9 taps - crude MORSE - which sent a valid message. Were it not for that, no one would have known they were alive until someone may have went in. AND - MAYBE - those digging operations after a couple hours would have slowed due to lost hope. The fact they knew those guys were still alive gave them urgency to press on......... Code CAN have a place in your life.

One other thing........ I cut my teeth on CB back when the FCC was busting CBers regularly for violations. I then got into Ham and Electronics. ALL radio services "CAN" and "DO" have a place when it comes to chatting, information exchange OR emergencies. ALL groups "can" work in unison for the betterment of mankind if desired. Ham has it's place. CB was used mostly by those such as "Auxiliary Police" - where not everyone had to have a "code" much less a license to have studied for - to use radios for their purposes. SEAT-REACT when operated properly was as useful as the Ham groups for emergencies.
At one time, I belonged to REACT and some local Ham groups. I'm heavily involved in Public Safety - so I got the best of both worlds. The REACT team died and if I'm not mistaken, maybe the founding unit. Believe me - in a HUGE disaster our fire band was SWAMPED. Ham and CB alike WERE IMPORTANT.
I had information on both coming to me - which was of enormous help. I was getting information that was not able to be had via the Fire Radio - due to it being so laden with traffic. I often use FRS radios now too - to avoid tying up the Fire Frequencies here. I USE WHAT I MUST to get the job done.

Can anyone describe what kind of memory back up battery this radio
uses?

How easy is it to replace, etc?

thanks!

They all carry the same stuff, they all charge the same prices and
I assume they all have the same ability to stick an address label on
a box and hand it to the UPS guy.

So, other than the obvious need to minimize sales tax, what
contributes to your decision?

As far as I know, the 746 uses non-volatile memory and there is no
```

back-up battery.

Russell-

Do a google search for IC-746_Service_manual. It is 50 megabytes, so I
can't eMail you a copy! (It may also be available at www.mods.dk.)

I did a quick search, but didn't see a battery. It may use non-volatile
memory so a battery isn't necessary.

Same here. I appreciate having a storefront in my town and
I support it by shopping there. I haven't had any problems,
so I don't know how they take care of it?

Locality.  I live and work within about ten miles of an HRO outlet.

On the down side, buying from them does involve state sales tax.
That's true even if I were to try to order through one of their
out-of-state outlets.

On the positive side, there's a lot to be said for having responsive
and near-immediate after-sale support.  On a couple of occasions, when
I've been sold a radio or antenna which developed a problem within the
first few weeks after purchase, they've been quite willing to do an
over-the-counter exchange for a replacement rather than requiring me
to ship the product back to the manufacturer for warranty repair.
I've had enough *bad* experiences with warranty repair on electronic
equipment over the past thirty-plus years to find this to be a very
real and tangible benefit.

It's also a great place to run into people and hear interesting
conversations.  They'll also give a small discount on accessories to
hamclub and ARES/RACES members, which makes up for part of the sales
tax on these items.

I do buy some stuff (small antennas, connectors and adapters, etc.) at
the local ham-oriented flea markets or at local electronic-surplus
stores.

Word of mouth (Internet reviews) is a good way. I've been doing business with Amateur Electronic Supply for over 30 years with no complaints. HRO is also excellent to deal with.

Not by tapping. International Morse requires dashes as well
as taps (dots). There is a tap code used in prisons that will
accomplish communications under those circumstances. And since
more people have been in prison than hold an amateur radio
license, seems that it would make more sense to require knowing
the tap code than to require knowing International Morse code.

No store nearby. Last time I bought, I went for price since they all do NOT have the same price. There are specials. You can, of course play the "but so-and-so will-sell-it-fir-$x, how-about-you? ploy. There is consideration for supporting the local guy or your favorite, however, if you have one.

I haven't bought from AES, but I've bought from HRO both by phone and in stores when I've come across one. My impression is that HRO tends to have good prices on the big items but tries to make up for it by having higher prices on the accessories.

I've made on-line purchases from Universal Radio and from R&L -- based on prices of the items I wanted. I've also purchased small items from Lentini in CT and from KJI in NJ -- in-store purchases in both cases.

Hello,

I'm searching a modification for the CB President Jackson to bring it

up to 30 Mhz.
I've searched on internet but I've only found simple modification to
add "F" band and reach 271 channels.
I'm a regularly licenced Ham!! and I want to use it on 30 Mhz.

Anyone know other modifications.

Thanks de Iw3arv Paolo Italy

I sure with HRO had the same quality type catalog that AES has. I must
admit that the catalog is a big reason I still purchase most of my ham toys
from AES instead of HRO.

DUH - I KNOW THAT - I was just saying the tapping let the people at the
surface know there were 9 people down there. MORSE CODE - "could" have
relayed much more info if one of them knew it. REREAD my message.......

I am fully aware of what "code" is, I'm an Extra myself - have been for
quite some time. I am also a VE Test Team leader.

Boy it's fun what a little trolling can do to my peers. I'm also an Extra, and licensed for 29 years.

Code is worth what it can do, but has had less and less to do with the hobby for decades. It's a great hobby within the hobby on HF, and was the core of EME for years. It still is to some extent, but advances due to moving up in frequency as well as computer based modes as low as 6 and 2 meters are making it something used for EME as much for fun and stubborness as for usefullness. SSB is a very popular mode on EME now among the big guns.

CW is dead as far as being needed. It's a great thing to have as a skill, but is now as needed as spark.

The person who said they could key an HT to send CW was stretching it way beyond reality. Ain't gonna happen, any more than someone will make a spark transmitter by keying a big bunch of wire they wound in a coil when trapped in their basement by touching it to the hot side of the drop in their fusebox.

I'm not sure if you're referring to my post or someone else's who I didn't see. In "my" example - I was saying if a MIC was broken and they knew code, they could short out the tranmit pins - like making and breaking contact such as a key would do - to broadcast a coded message. It "can" be done. There is what is/was known as "Modulated CW". And, I've seen guys key an H.T. OR Mic and do code with an "Oscillator" with the other hand - thereby transmitting the code - from the Oscillator speaker through the mic of the H.T or radio. Maybe that is what "they" were referring to - I don't know.

Then too along with the above - they "could" have been referring to using
the "key pad" to send code while the H.T. was keyed OR using the keypad on a
mic while it was keyed......... If memory serves me correct - at the moment
(slips at times) - THAT would be equivalent to MCW (Modulated CW). I've seen
that done too.

Dont you fall for these dastardly lies. You stay right where you are.
Trust me you do not want to be where we are, in 50 or so years you will
thank us for keeping you in cbland.

Butch

I compared retailers advertising in ham related publications and web
sites and chose GigiParts in Huntsville, Alabama.  They have low
prices, great service, and their web site is easy to manuever and use.
Two of my antennas and a dual-band mobile radio were purchased from
them.

Another plus for TenTec is that do trade ins on their own equipment. I
was very pleased with the trade in I received to upgrade my Pegasus to
a Jupiter.

Others have mentioned Ten Tec. If you go to their web site, you can
request their used/demo list of older Ten Tecs they have taken on
trade. They can be returned within 30 days if not satisfied. And Ten
Tec still services anything they made.

I appreciate all the ideas so far.

I have requested the ten-tec list.

In reading reviews about various Ten-Tec models, there is frequent mention about failing PTO's and the need for rebuilding.   How concerned should I be about this? Are certain models problematic in this regard than others?

In terms of various Ten-Tec models....any particular ones "stand out" over others?

I do have a TS-520S and agree that it is a very solid and reliable choice. It is in reasonable shape and I may put some restoration dollars into that as a "back up #2." I pulled it out of the closet after 10 years and fired it up yesterday. Works well on cw. Amazing how well it has held up after about 30 yrs. That was one expensive piece of gear for me when I was in college!

New Program : LINELEN.exe

This program calculates dipole feedpoint impedance, transmission line input impedance, and balun input impedance, versus frequency.

Dipole and line can be of any length. Line Zo can be of any impedance.

Power lost in antenna and line is calculated. Also overall loss.

In addition to its educational value, this program will assist users
to change line length when the impedance presented to the tuner is
beyond its capability to transform it to a resistive 50 ohms.

Download self-contained program LINELEN, file size = 53 K-bytes, from
website below.

k3pi@arrl.net wrote:

> In reading reviews about various Ten-Tec models, there is frequent mention about failing PTO's and the need for rebuilding. How concerned should I be about this? Are certain models problematic in this regard than others?

ALL PTOs need to be rebuilt at some time. They work by moving an iron or brass core inside tube with a coil wound on the tube. The lubricants dry out, they become dirty, the gears wear. Ten-Tec is different in that they still rebuild PTOs for you, sell rebuild kits, and include instructions in their manuals.

Some people have had luck with re-lubricating them. Special bycicle libricant has been mentioned on the Ten-Tec mailing list of doing the job, it contians very small balls of teflon. Others have used WD-40 to remove the old grease and applying fresh.

It depends upon too many factors to make a blanket statment. If you are going to buy a rig, try it out. If the tuning knob sticks, the frequency jumps or "wiggles" when you touch the knob, it probably needs a rebuild.

My personal favorite is the model 544 aka Trition-IV Digital. It is well designed and simple to repair or maintian. The digital part is the frequency display, not the tuning. If the PTO is in good shape, it is easy to tune "spot on". A lot easier than a sythesized rig except for the new ones with 1Hz tuning steps.

It only does CW and SSB, but it does them extremely well. It is missing the WARC bands (they did not exist when the radio was made), and it has a fixed 2.4kHz IF filter. Options for it were a second VFO for split operation, crystals for the top end of 10m, a switched capacitor audio filter for CW, and a 160 meter adaptor.

If you like full QSK, it has it, you can hear what is going on between dits if you send slow enough.

I understand that you can pick one up for about $200 and up depending upon options, if it has been serviced recently, etc.

Geoff.

I do see a few Michigan plates around here, but most are New York, New Jersey, and New Hampshire. There are also a few Ohio, Indiana, Kentucky and Pennsylvania plates. Of course they've all left for the summer, because its too hot for them.

Resort them by thread by using Google reader.  Some of the off-line
readers do a poor job of tracking threads.

Like yours????   To increase the chances someone will understand you
try writing in complete sentences.

Welcome to the bit bucket.

Thanks for the welcome, but I won't be staying. I take it you are in
charge of the bit bucket?

Unfortunately, it appears not too well..

>> is it true that everything else is unimportant to you -
> > only the quality? [there always have been jerks around.]
>
> So let's have more?

...is not an answer to my question and this question provides no clue. It implies I said that more jerks will result from those that will always be there...I think. or that I want more...

> >> You appreciate something more that you had to work to achieve, and
> >> respect the rewards it gives.
> > ...snip...
> > Yea.... I understand ... but what about putting the
> > prospective ham through other, more rigorous hoops, like electronic
> > theory, emcom, etc. Why won't more modern "hoops" work the same way to
> > bolster the individual's respect for the service?
>
> Yes, 85% passing score for writtens.

OK, 85% is another kind of hoop. but Please answer my "Why" question.

> >> Ham numbers are declining.
> >
> > I believe this is true, but what is you reason for stating this? Are
> > you glad this is happening or sad or indifferent?
>
> The numbers don't matter, quality does.

OK, so this seems to answer my other question. While I agree, that in a perfect world I would also restrict licences to only those who have a decent head on their shoulders...however, do _you_ trust _me_ to decide whose head is good?

These are my last questions:
Do you believe:
1- CW and 85% on exams will prevent or seriously limit the number of knuckleheads who sneek through?
2- That I am lying when I tell of some no-code techs that I personally know are the most serious, level headed and law abiding hams I know?

3- That I am lying when I tell you that I also know some very good hams who came up through CB and are just as law abiding when on the ham bands as anyone, just as serious about being good citizens, do emergency prep work and help others?

> Reasoning a service is good because it has lots of members,

[is incorrent reasoning] is what the implied completion of that sentence is.

I agree. There have been and are some pretty wacko organizations. ...but...

CB should be great then, but it's like a> kindergarten.
Is a gross generalization. How often do you listen? How many "CB'ers" have you recently talked to?

I listen once in a while just to see what's going on and be able to speak with first hand knowledge, and do hear some garbage, but I also hear of how it has helped in aread and ther ewere no hams around to help. Also, some areas have been worse than others,

1- I believe you have a limited view of CB [and no, I haven't been a "CB'er" but I have carried a radio on a few, I think two long trips where I would have trouble getting into repeaters for long periods.]. I have been helped by "CBers".
2- what percentage of CB users are jerks?
3- What percentage of hams are jerks? then...
4- What percentage of jerks makes the service bad?

My suggestions
CW optional as it is now for *ALL* modes, but remove from the tests...except possibly for Extra - my jury's still out on this.
85-87% on tests, but
Much more on propagation, antenna systems and emergency station operations and emergency communications and laws.

Then some others in the "if I were Amateur Radio Service God" department...
Currency requiremets like pilots that include familiarity recent developments.
Proof of license, and that you can understand, explain and operate at least 90% of the functions on a radio in order to buy.
If I wanted to be an old timer, I'd also require construction of something...knowledge of the history of ham Radio.
Then being more modern, something like proficiency in software, digital modes and satellite ops.
Gee, I should spend more time on these.... not. More important fish to fry.

Sorry, guys, I just couldn't resist a little chain jerking here.
73, Steve, K9DCI

At lease I got sc to answer a few questions ... sort of.

It looks like Buxcomm may have something that would work for me..... but I do recall seeing a small company marketing USB to TNC adapters a few months ago.... I think they were located in Washington State.... I can not find them and would like to take a look at their product again, too.

Ed

Dang! I have never been able to squeeze more than 23MPG out of my WRX.

Have you ever passed anybody?

Tom

Well years back there were CB STORES everywhere, and places like Sears
and Wards sold CB's, not anymore. Someone has to sell them.
Very litle interest in CB these days, however its the only real way to try and
communicate
with other drivers on the road.

The 27 mpg happens mostly on long trips. I might have been a bit optimistic to apply that number to the drive from our motel to the Hamvention, but I can get 24 doing it, if I don't hit the gas too hard getting on the interstate. Of course, the interstate is done on cruise control, and the area is flat, so no hill climbing, or not much, anyway.

This is a vanilla WRX, not an STI, and yes, I pass 'em all the time.

Its just that I use cruise control a lot, at +7 of the speed limit, and that does pass some people. I mostly pass 'em when they pull off the road to whiz, get gas, eat, or one of several other delays that I minimize. I don't usually stop at all until the car needs gas. This seems to make for good mileage.

Back in the day when I got my Advanced, my Tech class Elmer pointed out that if you don't know the code, how do you know what repeater you're on?

Most automated identifications are still Morse code and it is still legal.

It is sad that Morse code is so under utilized. It is a testimony to the lack of interest in the greatest tool for weak signal work. If you have no interest in learning Morse code, than you affirm that your communications

```
capabilities should be limited to voice capabilities.  Who in emergency
communications believes that their capabilities should be limited by a lack
of expertise?  Perhaps they believe that emergency commumications should be
restricted to FRS?  Rediculous!

Still, we see even avid DXers throw in the towel on a weak one when Morse
code would have cut through the pile-up in a heart beat.  A friend in High
School made DXCC in 2 years on CW only, with a 100 watt radio and dipoles!

The fact remains that those who hate the code are clueless to its
effectiveness.  Their only defense is ignorance.  Sad!

Looking for a 2m / 70cm transceiver, all modes preferred to permit SSB packet, which I've heard praised in this area (Oregon).

You on-topic suggestions as to a good voice/packet mobile rig would be appreciated.

You made good points until your last paragraph. I do not have the time nor desire to learn the code. If I were to learn it long enough to pass the test and never use it from day to day, then it will soon be forgotten. I think that if a person wants to advance, code should be part of the process and tested on a regular basis, but also have restrictions for those that do not or cannot use code or the hobby will fade away. To do away with the code would be wrong as it has it's uses, but to expect everyone to learn it keeps fresh blood from entering into a noble but dying hobby.

No. If they're too lazy to learn CW they can stick with CB, FRS, Cell
Phones, and two tin cans with a piece of string in between.

Maybe you have a few CB buddies you'd like to see get licensed, and dumbing things down will help, I don't know. Outcome based licensing. No one wants to be a ham if they have to work a little harder for the license and so no one wants to support having a good test to get one.

Another self proclaimed superior ham perpetuating the myth that CBers are
too dumb to pass the test. Keep that rift between hams and CBers and your
hobby will die an agonizing death. You have yourself to blame.

"An enforced set start time makes it more fair, as Extravaganza and Charlotte have proved. The other two should consider that... "

Well said....the greedy bastards who shop before the starting gun have been responsible for more people not coming back than anyone wants to admit.

And the clueless sellers who feed these buzzards are fools since it is clear that they could get more money for thier wares if they would wait till the starting time and raise their prices.

TMT

Mark Oppat wrote:

I got an amazing 39+ mpg from a 2.3L FWD Ford Tempo once, headed over

White Bird Hill into Grangeville, Idaho. Three weeks later the
transmission bit the dust.

Hi!

SSB packet on 2m and 70cm? Maybe at 300Bd? Must be very easy and
efficient...

As far as I remember, no mulimode dual-band mobile rig was ever produced.
Actually you only find IC-706 and FT-897 type mobiles with multimode
abilities on 2 and 70.
And exit the monoband multimodes such as kwd's TM255/455 (no more

produced)... For mobile action I'm using an old Yaesu FT-7100, which I also use for 1k2/9k6 packet with a TNC2-Multi (IfD, Germany) or a homebrewed soundcard interface and modern Software (Flex32, Paxon 2.00.1114, WPP 3.18, Soundmodem, under WinXP).

I think that in the USA, where 9k6 packet is a vague idea and TXDelays are sooooo loooong and fast switching is of no need, an IC 706 would do the job.
But I would recommend to take a rig with a miniDIN (sort of PS2) plug for packet/digimode action, so not really the Icom 706 brand.

The miniDIN tends to be a standard plug-and-play feature for most modern TNCs and digi-mode controllers.

And I'm quite sure you wiil need som links:

http://www.uspacket.org/
http://wpp.dc6hb.de/
http://www.afthd.tu-darmstadt.de/~flexnet/
http://www.paxon.de/

I intensionnaly do not give the paths to AGWPE or Winpack... I let you guess why.

If you are interestd in APRS, you can install WPP or use UI-View with AGWPE, but for Heaven's sake, do not use any AGWPE version for packet radio! The sysops and your packet mates will praise you.

73 de F8BOE Olivier ...-.-

You sure don't! Also a very bad assumption and groundless..Also wrong, not to mention irrelavant to my words and position.   I said that I already know *HAMS* who came from the CB side (only because they either told me directly, or I overheard then discuss it on the air) ---whom I met as Hams. They are top notch hams in every way.
I don't do CB, but have an old Morotola 40 CH AM unit because I want to have as much communications capability to handle any eventuality in an emergency. It would have been helpful in a serious malicious repeater interference situation a number of years ago when I didn't have even 27 MHz receive capability and it heloed solve and catch the perps.

> Outcome based licensing.

You'll have to explain the meaning of this.

> No
> one wants to be a ham if they have to work a little harder for the license

False generalization " On one..." and "harder" than what?

This was dis proved by one of the posters responding to you who said somethin like he wa looking forward to learning CW etyc... Unbeknownst to you, there are people who do value things for their own sake and will enjoy the feeling of self accomplishment..

> and so no one wants to support having a good test to get one.

Well here *IS* one. I support a much harder test in the areas I previously outlined. I *DO* agree that the CW hurdle can be one which makes us value the license to a significant degree...HOWEVER, I believe it is not the ONLY thing which can have this effect, as you appear to believe. I do do CW, enjoy those contacts, marvel at the ability to QSO with any country / language with it and feel (alittle special being) part of an esoteric group that knows it. However, it doesn't make me a better person simply because I know it. My value derives from a deeper value.
Knowing that Hams were a VERY significant factor in communications for 9/11, the SE Asia tsunami and Katrina makes me feel good and I bet there were many code-less hams involved.

I'm a "techie" and would love to require everyone to build something and explain something regarding electronics in much greater depth than on the current tests. I also KNOW that this will not guatantee an all around "good" ham. I also enjoy the diversity of those I meet on the air that aren't Electrical Engineers or Technicians.

I think that if your position was valid there would haave been no jerk hams in the past, when CW was on all tests.

Why was Knowledge of Morse there in the first place? Understanding this in full context is, I believe, critical to cussions on this issue.

If you can't conceed that any of my points have any validity, than so be it.
It is your right. But I find you very closed minded and unable to
intelligently discuss a complex issue in a mature way. It is your right and
I'll also deffend your right to have your opinions. If for no other reason,
it allows me (and hopefully others) to more firmly and intelligently form
and understand mine.

73, Steve, K9DCI Always willing to show my true identity. and hopefuly
express thoughtful and well reasoned viewes along with correct and
understandable technicial explanations for others.

If you'd like the WARC bands and a selection of bandwidths in an
excellent CW rig, check out the Corsair I or II.

found this old Realistic Pro-45 "beast" of a scanner and it amazingly works.
it's an eight channel scanner that uses crystals.

currently a local 2-meter repeater is the only active frequency in my area.

can somebody help get or sell me some crystals and/or the manual for this
radio?

the crystals i'm looking for are:

148.525mhz
150.100mhz
154.935mhz
154.620mhz

156.800mhz
162.400mhz

please reply by email.

thanks!

The Realistic Pro-45 Patrolman Scanning Radio was introduced in 1978.

Strong Signals is a popular SWL / monitoring web site
http://www.strongsignals.net/index.cgi

First, start with the manual.
Anthony W. Haukap of St. Louis, MO has compiled Scanner Owners and Service manuals:
http://myweb.accessus.net/~090/toc.html#scan

Here is his Radio Shack / Realistic series
http://myweb.accessus.net/~090/bearcatting.html#rsman

Photofacts from Howard Sams Publishing division of Prentice-Hall at
(800)428-7267, http://www.hwsams.com/sams_model_new.html

Repair Tips for Realistic Scanners (Bob Parnass, AJ9S)
http://www.repairfaq.org/REPAIR/F_RS_Repair.html

Crystals - they are not $2 each anymore !

ICM (they have deep library of equipment crystal specs - best in industry)
http://www.icmfg.com/

JAN Crystals
http://www.jancrystals.com/

Bomar Crystals
http://www.bomarcrystal.com/

Ken's Electronics - MAY have some NOS surplus - Inventory reduction sale
http://www.kenselectronics.com/lists/scanxtal.htm

I have a CON 6 System Saber I am trying to read with version R3.00.2 and although it passes the serial COM test, it gets hung trying to read and reports "Could not acquire busy line" etc.

My dedicated radio programming computer is a genuine IBM 486 25 MHz and is tried and true on various RSS including "plain" Saber, so I doubt its the set up, I tried a spare RIB box, tested a plain Saber (works) and am stumped. I even trimmed my config.sys amd autoexec.bat. Yes I am using DOS 6.22.

Could it be that CON 6 (1995 vintage radio) is too new for this 1992 software? Version R3.00.2 is all I have to work with.

Any help would be most appreciated.

"Morse or Re-Morse" <see@double.you> wrote
> Radio Shack. You got questions, we got blank stares.

My 17 year old RS Optimus speakers gave up the ghost. I went into a Radio Shack and was told that not only does RS not sell speakers like that anymore, but speakers with one tweeter plus one mid-range plus one woofer were not even manufactured anymore and that it takes half a dozen modular speakers to set up a system nowadays.

I went over to Fry's Electronics and found exactly what I was looking for from Cambridge Soundworks. The woofer only goes down to 40 Hz but for my karaoke system, that's good enough.

Please see my auctions of some really rare gear including a Central Electronics 200V in near mint condition, one of only a few made Atlas 400X Transceivers, a super clean EAC R-390A Receiver,
a Sony SW-77, and some test gear. See at:
http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZhugQ2daQ2dbug

I have a very clean Kenwood TR-9130 2 meter All Mode Transceiver with the

Communications Specialists SS-32P Tone Board Installed. This little rig works great. It puts out 25 watts or 5 watts.

The readout is clear and bright green. It comes with the mobile mount, power cable, mic, and original manual and instructions for the Tone Board. This transceiver has very low hours of use. It shows almost no wear. Cabinet and Front Panel are near perfect. Price is $200 plus shipping.

Thanks, Charlie Hugg

SolderSmoke #24: ROCKBOUND HB SSB, Two tone mp3, W1FB amp, SlimGem amp, ELSIE, Book review, Mailbag

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.ourmedia.org/node/231317

Topics discussed in SolderSmoke #24:

-- Mike's rockbound SSB success!
-- Two tone tests via mp3
-- W1FB 40 db amp strip
-- HF Packer SlimGem 5W MOSFET amps
-- ELSIE filter software
-- BOOK REVIEW: "From Crystal Sets to Sideband"
-- HF+6 diplexer
-- MAILBAG: Jerry AA6KI sends in "Lamp Talk" cartoon;
Mike WA6ARA on VO-52 as a good QRP satellite.

NEXT EDITION: Bill will be using an Astatic D-104.

Listen at: http://www.ourmedia.org/node/231317

Background:
Tired of listening to Led Zepplin or NPR on your I-Pod? Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software. We've been having trouble with our Ourmedia RSS feed, so Mike (software wizard that he is) has homebrewed his own RSS feed. In order to subscribe to SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.ourmedia.org/node/231317

Here's the homepage for our show. All our programs are available here. There is also a blog and links to some of the sites and documents we've been discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us

```
feedback.

Collins KWM-2A Transceiver
Needs work.  Plugged it in and lights up and no receive or transmitt.
I looked inside, and see no crystals in it. It's a fixer upper or
parts radio. Cabinet needs repainting,etc.
All parts are in it. Don't see anything missing, other than crystals.
Make offer or let me know what you have to swap for it.

Drake R-4C Receiver NB/Filters/Cables
Has all three filters on rear of unit. Also has
the Noise blanker installed and lots of extra crystals
on rear of unit with cover over them.
Also have all the hook up cables to go to a TX-4C and mate the R-4C.
It looks very nice and works very nice.
Make offer on this BEAUTY!!

The FCC is not requiring specific testing for PSK31, RTTY, Hellschreiber, Olivia, etc. and all those modes seem to be used pretty extensively on all the bands. Not to mention, programs like MixW and especially MultiPSK do an excellent job of sending a receiving CW. I see all the modes continuing to flourish in the future even if a specific test for one mode (CW) goes away.

The only issue with APRSPoint is that support and upgrades are sorely lacking. The Yahoo group he runs is censored so that any suggestions or criticisms of his product are not posted. He needs to really upgrade this program. It is one of the most expensive and also has the least amount of features. Nice start, but the author needs to really spend some time getting this program up to where all the other APRS programs are in functionality.

The newest one is very good, I think. This is the first time I"ve read chapters all the way through. I am re-entering ham radio after a long absence.

I think the technical writing varies among chapters but on the whole is quite readaable without being "dummied down". This is more difficult to achieve than it sounds. Technical writing CAN be an art, though it seldom is. ARRL editor deserves a lot of credit.

There are probably fewer homebrew projects (or at least they are simpler) than the old days. But, there seems to be more info for building than I remembeer...ordering PC boards, sources for parts, etc. I think blending them into the theory within chapters is a very good idea.

That's my $.02 worth.

Hello,
I'm looking for a TR4131 spectrum analyzer manual
and/or calibration instructions.

Any feedback would be appreciated.

the concern is obvious for decades the CW crowd has relied on the
requirement to force all ham to at try it. mode welfare. they are afaid
without that stick the mode will die . it show a lack ocnvednce in the
mode

Even if I could learn the CW, I'm too stupid to pass the written test.

I have this congenital problem, you see. Life is NOT good for me.
I suffer from Microcephalic Dwarfism and I've been afflicted with it since I can remember.
Definition: These syndromes associate growth retardation with microcephaly and various facial anomalies.

My forehead is smaller than that of a normal person and my cranial cavity is little larger than that of a Florida orange. My sloping forehead has only one advantage in that it allows me to insert it into my rectal cavity with little or no pain. While less than comfortable, and while it impedes clear speech I am able to keep my ears warm in the coldest of climates, but those are the good points.

I have suffered from extreme retardation all my life and have recently been considering placing my head in the oven. I am betting that the accumulated yeast in my mouth will aid me in blowing my head off at 350 degrees, thus ending it all.

You guys have no idea of what torture it is to live with my afflictions. You will miss me when I am gone.

Thanks for that John.
I haven't seen the latest issue, but have a 1995 issue. It has a number of
construction projects, but certainly fewer than the older issues. And those
that it does contain are solid-state related. I guess that falls to the modern
times.
I'm specifically looking for projects and articles related to vacuum tubes and
their uses in ham radio.

I totally agree that technical writing is an art, and should be practiced by
someone who has a good knowledge of the subject being documented. Lack of

knowledge results in confusing writings, which at times can be totally wrong. I develop computer software for the US Navy, and see more of that than you might think. No wonder those weapon system manuals cost so much to produce. Paying competent tech writers what they deserve is an expensive task.

Thanks!@!!!

why me the ham to whom you repsonded?

none at all
why do you ask?

but it is clear from LONG term expousure to the cw Forever crowd many
of them lack much confidence that the mode can survive without the
stick of code testing to make hams try it out

futhermore if CW die it will be becuase of the atitdues of it's
advocates

I have for sale a TenTec Orion with the Automatic Antenna Tuner that is in Excellent Condition. I am the second owner and neither of us have used it much. It looks and operates like new. It did have a problem right after I purchased it and I sent it back to TenTec in February 2006. They went through it completely and fixed the problem and while it was there they did all the current mods to each board. I have all the documention from TenTec. It is completely up to date, except they installed the Firmware, Version 1.372.
That was current Firmware at the time, but they have since come out with a Version 2 of the Firmware.
This transceiver is loaded with all available filters. It comes with the original manual, shipping cartons, power cord, etc. I don't think you will find a nicer one on the used market. It is the best transceiver that I have ever owned, but I just don't operate it enough to justify the expense. Price is $2675 including the $330 worth of optional filters. I also have just about all the other optional accessories for the Orion and I will offer the Orion buyer first chance at these,e.g., TenTec mic, remote encoder/keypad, cooling fan that I never installed, matching power supply. Thanks, Charlie Hugg, K5MBX

Icom 910h is worthy of consideration dula band fairly high power
(option for 1.2 gig) neer heard of vhf.uhf packet on SSB but souunds
interesting

Please help a newbie: what is SSB packet?
I am guessing data in one sideband with 2.5 KHz bandwidth or so?
I still confuse PSK and packet.

Mr. President?

Hang in there, soon the Congress will pass the constitutional amendment
preventing fags from having a piece of paper and all of this country's
problems will be solved forever.

As we all know the licensing requirement does not eliminate idiots on
the bands.  Far from it unfortunately.

Jawod-

For practical purposes, SSB and FSK Packet are the same, just different ways of generating the signal.

If you have an RF carrier and shift the frequency, you are switching between Mark and Space frequencies. A typical Packet TNC also puts out audio tones that can be used to drive the microphone circuit of an SSB transmitter. The resulting signal is equal in frequency to the carrier plus (or minus) the Mark and Space audio tones.

If you tune your SSB receiver to decode an incoming Packet signal, your transmitted Mark and Space freqencies should line-up with the received frequencies. However Mark and Space may be reversed. If it won't decode, switching to the opposite sideband and retuning should clear it up.

Both services have their place. I would keep the CB and install a
multi-band Ham radio such as the ICOM IC-706MKIIG or a Kenwood or Yaesu
and a multi-band antenna to match. You will find both an adventure.

I think that you asked precisely that same question (modulo one typo) back on May 16th, April 15th, and April 3.

I think you have no serious interest in the answers you've received.

I think you're acting like a juvenile troll, and therefore receive 0 points on the Troll-o-meter (with a three-point penalty for showing an utter lack of imagination in your trolling).

> thjink?

Depends on how you feel about inbred hicks. If you're right at home with rednecks, white socks, and Blue Ribbon beer, CB may be your thing. OTOH, if electronic hole theory of semiconductor physics is more your cup of tea, ham may better suit.

Both camps can be serious as a heart attack about their equipment. My late FIL was an avid CB'er. He had the first Yaesu I ever saw. A $1600 model under a huge boom antenna on a rotating mast which he used to talk skip all over the country. His boat and car both sported illegal linears pumping top o' the line Cobras. I know he didn't know spit about antenna theory, and probably more importantly, didn't care. But, he knew who to ask and being able to do so on his rig is what it's all about, right.

While I, myself, was never attracted to long discussions with truckers about the merits of strip clubs or local gossip about the "new waitress down at Bubba's", I knew some of the local CB'ers and knew they were good people. CB, specially with respect to home stations, is just another mode of communication to them. This is more true in rural communities. The ham crowd, OTOH, by it's very nature of requiring a basic knowledge of science, tends to attract a more geeky element, a more literate slice of humanity. Not necessarilly better, or even smarter, just more educated and more into the technology of radio communications.

Try them both and then choose one or the other ...or both. Good people are good people, no matter the media.

Alzheimer's?

Judging by the photo galleries, most of the participants can only be perceived kids if their parents are fossils! ...kinda like me. ;)

Hi everyone:

Is it just me or has there been a tremendous amount of immature 11 meter-like activity on 14.275 Mhz USB??

I say this because I can [b]hear[/b] it with my ICOM IC-706 MKII-G and my mega-cheapo coathanger setup that I threw together which is plugged directly into the back of the radio.

Even when there have been legit QSOs on there, some a--hole Or a group of a--holes for all I know) would find some excuse to get on that freq. (or very close to it) and cause malicious QRM.

If these are licensed Hams, then they deserve to lose their licences. If they're bootleggers, I just hope they've got an IRA or two 'cause they'll need it to pay off the FCC.

To give you an example of what I've been hearing, I've heard just about anything and everything ranging from silly PC-originated sound effects to (Not even a half hour ago now) old Rocky & Bullwinkle clips.

If this is old hat to you old timers on the HF bands, then please excuse this post (I'm fully aware of the mess known as 14.313 BTW). Hopefully Riley Hollignsworth is monitoring over there and is taking action. ;)

If i can, I'll do a short video or two sometime (I'd rather do a video as then people will actually see what freq. the radio is tuned to as the cam will show it) with my Logitech QuickCam STX as its got a pretty good built-in mic so I don't need to stretch a long cord to plug to the line in jack. :) I'll then either send them to Riley via email or put them on a live page on my website for THE WHOLE WORLD to see and hear.

Gee....That's not a bad idea. Maybe if a few potty mouthed Hams found themselves on some Ham's website in a negative light, they just might change their ways before[b]Rilley[/b] catches them. ;D

Then again, if they're anything like K1MAN, they probably wouldn't even notice....

Anyhow...Just wanted to post a heads up for those of you who haven't been listening. :)

Cheers & 73 :)

APRSPoint is the latest APRS implementation and it is being used in vehicle tracking, search and rescue, emergency communication and many other areas. It allows you to track persons or objects via rf or internet. It is constantly being updated with new features and improvements. We are offerring a special discount for this memorial day weekend. Please visit http://www.aprspoint.com for details and lots of helpful information about APRS. Thanks.

In article <1147696288.467142.307970@u72g2000cwu.googlegroups.com>,
freda@terra.com.br (known to some as Roberto) scribed...

> What would be the "legal" frequencies?

Read the previous replies to your question.

The answer, again, is that NONE of them are "legal" for you to transmit on as long as you do not have your amateur radio license.

GET YOUR LICENSE. Learn what the heck you're doing. You're asking for big trouble from your local federales otherwise.

Gerry,

Personally, I would concentrate on the effect of the magnetic field as a trigger of brain malfunctions.

High RF fields tends to create sunstroke symptoms if excessive but high density H fields are known to even create visual effects like flashes etc.

Also, Scandinavian studies on the effect of high power lines shows that it's the magnetic field we need to be vary about.

As you might, or might not know, it's a common practice in Scandinavia to bury powerlines instead of mounting them on towers or pylones.

A lot of money and effort have been spent there and you might be able to use a lot of this material as reference material. The studies concentrated on possible cancer connections like Leukemia, which they found, but as far as I know, neglected to look into other forms of disturbances or anomalies like the effect on the brain etc.

Cheers

Dan / M0DFI

Hi,
I am looking for the USER'S manual of the Kenwood TW4100E (U/V dual
bander), in electronic format (PDF, PS, GIF, etc.).
I DO HAVE the service manual. Any help most welcome.
73,

Michele IZ2EAS

And even cheaper when you buy it at the Hamvention - same rig in the store a day later is $50 more...

>what kills hamfests is lack of interest

Sure, but the reason for the lack of interest is the crux of the situation.

>buyers of estate gear at dirp cheap prices
>that markup to sell on ebay and hamfests.

Some people gotta make a buck... But the Hamvention is coming back, I think - there were _definitely_ more people there than last year, and equal or more exhibitors both in the flea market and inside. We may yet get back to the state of affairs where there's 30,000 people coming to the Hamvention again, complete with a banquet and free buses, and buses to the motels. We can hope - its a great weekend.

We do need more ham radio gear and less outright junk in the flea market, tho.

<snort!> Like Bellsouth cares. I've had lots of their IP space blocked out of our systems for the last few years, mainly because they don't give a rip about spam, or the fact that their network is full of spammer-zombie PC's.

Keep the peace(es).

  I'm considering building a remote controlled balanced tuner.  Some type
of low RPM motor 12V reversable motor is what I have in mind to accomplish
the tuning.  I will have two fairly hefty variable caps to turn along with
a moderately sized roller inductor.

  Can anyone here recommend a particular type motor, and a reasonable
source for the the type of motors I need?  Tnx.

Try these;

http://www.allelectronics.com/cgi-bin/item/DCM-249/400/
POWERFUL_WINDSHIELD_WIPER_MOTOR_.html
http://www.allelectronics.com/cgi-bin/item/DCM-243R/
400/12_VDC_GEARHEAD_MOTOR_(RIGHT-HAND_VERSION)_.html
http://www.allelectronics.com/cgi-bin/item/DCM-243L/
400/12_VDC_GEARHEAD_MOTOR_(LEFT-HAND_VERSION)_.html
http://www.allelectronics.com/cgi-bin/item/DCM-171/400/12VDC_GEARHEAD_MOTOR_.html

They have a lot of torque, and are used in robotics a lot.

A savings of $50 is a hill-o-beans when the
radio sells for 5G anyway and is buillt inside
like a cheap VCR (most Icoms fall into this category)

I was thinking more like a hi-end HT, at maybe $350 instead of the regular
price of $400.

>and is buillt inside
>like a cheap VCR (most Icoms fall into this category)
```

Not the Kenwoods I buy. I think ICOM makes some fine radios, too - they're pretty well respected, and most everybody wants a 756...

My main rig is a Kenwood TS-850S. I am considering getting a back up rig for it.

Main interest is cw. Internal Antenna Tuner is nice. Bands higher than 10m not that important.

What models do you recommend that: represent good value, reliable, can still be serviced (if used)?

Will appreciate opinions on this.

Thanks & 73,
Russ K3Pi

Russ - Might suggest the Elecraft K2. http://www.elecraft.com In its simplest form an outstanding CW rig. Although its kit, some used units are starting to be found as over 5,000 have been sold.

Also take a look at the K1 and KX1.

Try a Ten-Tec. Many Japanese rigs are designed for SSB, with CW as an afterthought. Ten-Tec rigs, while they work perfectly well for SSB, were, and still are, are designed with a CW operator in mind.

Their older rigs can be easily serviced, and they still sell manuals, parts and fix them for you.

The older ones don't include tuners, but a modern external auto tuner will work with them.

Geoff.

They will be left in the dust.  I suppose those who don't have a
computer or don't trust online transactions could try setting up an
ether-based net using morse code.  I suspect that it will be largely
one-way communications though.

Why not keep it in the Kenwood family? IMO, the
best value in a lowband rigs these days are the
TS-520, 820, and 830. These are all older rigs but
are repairable, lots of good info is available about them,
and they are inexpensive. No internal tuner though.
Good stability and performance as well.

My every day rig is a TS-830S, but I use an -820S
as well.

Just find yourself another TS-850. They are nice radios and retain there value.   Watch out for TS-440S they have numerous problems that can be fix but something that you might not what to do. If you want to stay in the Kenwood line TS-450 are selling fairly cheap and are a nice radio and small or go for a Icon if you want to switch like and one of the 706 series radios.

+1 bon the TenTec. You can pick up a great CW rig for a couple hundred
dollars. My primary rig in now a TenTec Orion, with a TT corsair II and
Argosy II as backup rigs.

My first TenTec rig was bought as a backup to my Icom 746pro, but its
receiver proved to be far superior to the more 'modern' 746.

NOTE: Crossposted to rec.radio.amateur.equipment and rec...homebrew.

For some years, I've had a Kenwood TM-251A 2-meter xcvr (with 440 rcv) hanging from the ceiling of my pickup truck, and recently the TouchTone pad (in the microphone) quit working and, while PTT causes plenty of RF output, there's no AUDIO output.

I'm pretty sure the problem is in the microphone electronics OR its 8-wire cord. I've "beeped" the cord from the telephone/data-like (RJ-45?) connector to solder joints on the mike PC board (it's quite a full little board!) and don't find anything wrong (but it's hard to hold a probe on each end and wiggle everything in the middle!). I'd replace the cord in a flash except I can't handle that %$#@! RJ connector.

The only microphone detail in the xcvr Service Manual other than the connector pinout:
   UP
   +8 volts (I measued +7.25)
   GROUND
   PTT
   ME (Mike Earth?)
   MIKE
   RD (Read Detect? An output, perhaps for use with a TNC?)
   DOWN
is the fact that PTT, UP, DOWN, CALL, VFO, MR, and PF are connected to three analog-inputs (and ground), thus "using up" four of the seven input wires and leaving just two wires (MIKE and ME) to handle the remaining 16 TouchTone keys AND audio!

PTT, UP, DOWN, CALL, VFO, MR, and PF do work as they are supposed to.

With "Remote Control Mode" ON, letter "A" on the TT pad is supposed to start frequency input from the keypad, but it does NOT. With an oscilloscope probe on the MIKE and ME wires, pushing "A" gives no

visible change in the trace, but my jury-rig setup would probably miss
a single tone-burst, so that is probably an inconclusive test other
than the xcvr CPU didn't respond, either.

Any suggestions?

Please visit this webpage - look near the bottom half of
the page. I'm trying to learn about amplifiers and have a
question about an AL-84 I'm messing with. I needed to
refer to an image of the schematic, so I put the image and
the question on my cox homepage:

http://members.cox.net/kg0wx/

Thanks!

The book for it calls for a minimum of 400 watts out for 100 watts of drive.

http://bama.sbc.edu/ameritro.htm

They are not using a tuned input so to match the tubes to a 50 ohm driver they are using the resistor as a lossey input. About 40 watts or so are being dissiapated in the resistor and 60 or so are being used to drive the tubes.

Look for a Cat5 computer LAN patch cable; cut off one end. It won't be

coiled but it will be flexible & the plug will already be there for you.

Hello Brian,

thanks for the suggestion. It's simple as I thought. I have the
intention to realise something like the vox circuit that si normally
used on the transverters.
The best I think is a separate unit with the possibility to switch from
rx and tx manually and automatically with the vox.

73 de Paolo Iw3arv

>Greetings, Paolo. You can use an antenna switch. You need a switch with
>three total connections. One for the receiver, one for the transmitter, and
>one for the antenna. When you hear CW and are ready to transmit, switch from
>the receiver to the transmitter.

Have you checked at the rig end? I've had broken or intermittent
connections to the mic socket - the socket pins have poor soldered joints.

Bob

They are too dumb to realize that the ebay search will bring up the
item to those who are interested in finding it.

We generally stay at the Holiday Inn at one of the Sidney exits. $69 Thursday night (business rates), $59 Friday and Saturday nights. Can always get it, it's outside the sphere of influence of the Hamvention. 40 miles or so to Hara, but that goes by real quick. Sits right beside a Bob Evans restaurant, and across the street from a Waffle House, so breakfast is guaranteed to be good, which is all you need. Dinner can be taken anywhere near the Hamvention, then just drive back north. If you don't have an 8 mpg truck, its just fine.

FT: Collins KWM-2A
I have a nice Collins KWM-2A Winged Emblem
It receives fine, But no tx?
I hear a relay everytime I key the transmitter,
but no power out. Also will need alignment.
Make offer or will trade.
Let me know what you have for trade and maybe we can make a deal.

Reading all you wrote, what you are basically saying is that no one wants
to be a ham now days, so licensing requirements have to be low in order to
help keep our numbers up. They won't work for a license.

My arguement has always been for the quality of the hams. You appreciate
something more that you had to work to achieve, and respect the rewards
it gives.

Cheapening something makes it disposable. Ham numbers are declining.

you arguement is false

I value things based on their proifit to me

My tech license is higher profitable becuase it took little to get and
get me a lot
>
> Cheapening something makes it disposable.
how is making testing reflect reality cheapening?
> Ham numbers are declining.
becuase of age mostly

hams are litterly dying off

No I don't.   Why is this particular idiotic thread in every major ham radio
group?  It finally dropped out of DX,  and now I find it in "equipment".
How about you children make your own little group,  all climb into it,  and
make each other happy.

Dan/W4NTI

I don't think that's entirely true. I'm working for my license.
Learning code, radio and antenna theory, SMT, and every other thing I
can think of. Got an ARRL Handbook ('91), a cheapo hand key, and a G.
West test book. Do I think code should be required? Yes. IMO,
knowing what I'm doing is what being a ham is all about. Knowing code
is part of that. In fact, with the possible spread of BPL, CW may
again become the only way to punch through. If I just wanted to press
a button and yap, I'd buy a CB or a cellphone.

I get approx 27 mpg with my Subaru WRX and there's 3 of us to share the gas if I were all that uptight about the gas, which I'm not.   I don't lose any sleep, I just go to bed before Jay Leno instead of after. And that's a pretty low rate for Hamvention weekend. Anyway, its only $8.88 for gas per day, which is just dirt cheap.   Find a motel like Holiday (pool, hi speed access) that is closer for the $8.88. Unlikely.

As for the driving, I drove 550 miles to get there, and 550 back, so 40 is just not noticable...

Oh, the irony!

Markie Morgan, kb9rqz, proves his illiteracy when he slobbered
in Message-ID: <1147884138.829873.289830@j33g2000cwa.googlegroups.com>:
"Icertainly can so I am not ileiterate"

```

Slow,
Can you address any of my comments in my previous, or here ?

> My arguement has always been for the quality of the hams.

OK. Given this, is it true that everything else is unimportant to you - only the quality? [there always have been jerks around.]

> You appreciate something more that you had to work to achieve, and respect the rewards
> it gives.

I think I can agree with this. Give a kid a car or whatever, and he's more likely to treat it badly. Make him work for it and he appreciates the value and shows the appropriate care with it..

> Cheapening something makes it disposable.

Yea.... I understand that having to do the CW thing is more work and more likely that the licence will be valued, but what about putting the prospective ham through other, more rigorous hoops, like electronic theory, emcom, etc. Why won't more modern "hoops" work the same way to bolster the individual's respect for the service?

> Ham numbers are declining.

I believe this is true, but what is you reason for stating this? Are you glad this is happening or sad or indifferent?

73, Steve, K9DCI

Yes,  85% passing score for writtens.

>
>> Ham numbers are declining.
>

The numbers don't matter, quality does.  Reasoning a service is good
because it has lots of members, CB should be great then, but it's like a
kindergarten.
```

There's an increase in recent years of ham gear Retailers offering an expanding amount of citizen band radios and related products.

So Retailers have seen the changes in the type of people that are making up and will be making up the US ham population, and have modified their inventories and marketing to stay in step with it.

Gotta keep selling them radio's, Ten-Four?

I have about 15, KENWOOD - UHF - mobile model TK-862/TK-862G units for sale.

They are all very clean and in LIKE NEW condition. They come with the Kenwood mic.

Click on these links to see pictures:

http://imagehost.epier.com/35528/kenwoodtk-1.jpg

http://imagehost.epier.com/35528/kenwoodtk-2.jpg

http://imagehost.epier.com/35528/kenwoodtk-3.jpg

http://imagehost.epier.com/35528/kenwoodtk-4a.jpg

http://imagehost.epier.com/35528/kenwoodtk-5.jpg

For specifications on this unit click on this link:
http://www.bandtcom.com/762.pdf

They were recently remove from service in cars so they are very clean.

The price is $95 each plus $11.85 shipping in the lower 48 states.

I will ship world wide.

If you want one or more of these very nice radios, please email me at:
rfpexec@yahoo.com
(rfpexec at yahoo .com)

Thank you for looking.

Bill

Either that, or they noticed that the anal-retentive old fart CW losers
aren't buying new equipment so they're marketing to somebody who will.

Our local university club had one of these that was flakey as well, it had been hit by lightning and both receivers worked, but from the testing I did on it, the ptt no longer worked as ptt, one of the freq change buttons now worked as ptt, but locked on when pressed once, then turned off when pressed again. The other buttons on the mic were similarly mangled up. No one wanted to spend money to actually fix the piece of junk, so it just got shoved in a box and stored away. Good luck on getting yours running, I was not impressed by the recieve audio, and with the transmit problems with the one we had I never did listen to its transmit audio.
thanks, John.

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.ourmedia.org/node/229696

CHECK OUT BILL'S NEW Gadgeteer Blog:
http://usgadgeteer.blogspot.com/

Topics discussed in SolderSmoke #23:

-- Mike solves DSB rig problems
-- Low frequency parasitics
-- More on ladder filters
-- Adjusting SSB rigs
-- Listening to ham satellite from India
-- Monitoring aircraft radios from the kitchen
-- London Amateur Television
-- 747s as high band passive reflectors
-- CW advantage? SSB advantage?
-- MAILBAG (with new GONG!): Mark, KA6WKE; Merv, M3LYJ; Terry, WA0ITP; Jack, G3PVG; Nigel, M0NDE; Paulo, CT1EFL; Mike, KD5KXF.

Listen at: http://www.ourmedia.org/node/229696

Background:
Tired of listening to Led Zepplin or NPR on your I-Pod?   Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software. We've been having trouble with our Ourmedia RSS feed, so Mike (software wizard that he is) has

homebrewed his own RSS feed. In order to subscribe to
SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the
site below and listen to the latest program (and
earlier editions) using the audio software on your
computer.

http://www.ourmedia.org/node/229696

Here's the homepage for our show. All our programs
are available here. There is also a blog and links
to some of the sites and documents we've been
discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us
feedback.

73 from London

...for fixing up your old Heathkit HW-16. Pics, details, and order at
www.hayseedhamfest.com .

Easy to install - If you can put on a postage stamp, you can install one
of these.
Pre-cut holes and voids.
Self-Adhesive doesn't "stick" until you're ready for it to!
Durable - 6.4 mil thick.
Colorfast - Uses outdoor-durable solvent-based inks.
Abrasion Resistant - Thin, clear, laminated layer "seals in" inks.
Easy to follow instructions.

Tnx for looking and 73,
Tom N�JMY . .

You cant touch or feel or converse as well with internet sales....nothing beats the face to face events, if they are well run. In the antique radio world, Extravaganza is one of the best, Bolingbrook is making a strong comeback from the Elgin days, Charlotte is strong and Kutztown is overflowing into the next pavilion.

All you have to do is have a good facility, be open to the general public for free or little money, and promote your show like crazy. An enforced set start time makes it more fair, as Extravaganza and Charlotte have proved. The other two should consider that...

I sold at Dayton in '96 and '97. It was sliding down then even in my opinion... I only sold about $1300 worth in two days... about half that could be considered profit. Not worth it for what was essentially 4.5 days worth of work (1 day loading, 2 days there, one day RT driving, half day unloading). I had all tube era stuff.. tube sockets, capacitors, trimmers, Ham type tubes, etc, etc. All the guys stolling by had "Rice Boxes" strapped to their belts and didnt know which end of a soldering iron to hold. One guy even held up an old RCA 811 tube to show his buddy and said "I remember when we used to use these things!" His buddy'd never seen a tube I think, and he was about 35, this being back in '96.
I had 100 pc bags of mylar and filter caps priced lower than anywhere, and I mean ANYWHERE. Still do.

Mark Oppat

I recently acquired a used Vertex VX-10 without a manual. Can anyone here
tell me how to do a CPU reset? Also looking for a manual in PDF format.
Thanks.

Hi All,

I acquired a Pitch-Prop motor a number of years ago, with the intention of building a antenna rotator.
I still have the intention of doing this, and have checked the motor for operation. This works out very nice, and was able to control it to different speeds with different voltage.
I have a construction design for the mounting of the motor and gearbox to the tower, and antenna.

The problem I have now, is I wish to construct a suitable control unit, with digital readout, and the possibility of controlling via a mini PIC control, or via PC.

I have searched the internet without much success, so my next course of action was to see if anyone on these groups might be of help.
So I put my hands up for HELP! :)

Any help would be gratefully received.

Thanks in Advance.

Kevin, ZL1KFM.

Excepting the readout, this should be a fairly routine motor control problem. Depending on what you want to do your control box could be as simple as a current-limited power supply and a couple of switches or as complex as a fully fed-back motion control system.

How's your electronics skills, and how fancy do you want it to be?

I also had a great time. This is my 43rd Dayton Hamvention in 45 years of being a ham. Yea, it's changed a bit, but still, IMHO, worth the price of admission. I found everything on my list, and at acceptable prices. Some things were indeed overpriced, but just walk away and keep looking. I'll not forget the old Johnson Speedex key (in excellent condition) that I bought from some guy in a cold drizzle for $8 a few Hamventions back. He was anxious to sell anything. Maybe the best buy I've ever made at a Ham 'tailgate' (or flea market if you like).

Of course it does help to be an hour away. No airplanes or hotel rooms does make it affordable and easy, no argument from me. If E-bay killed Dayton, wonder why all the people were there anyway. It was as crowded as usual.

I'm already looking forward to next year.

I honestly don't think $25 is that out of line. How much are boat shows, Home and Garden shows? Probably a LITTLE less but they draw from a much larger market and have significant vendor support.

I was hoping I'd see something in these groups about some new products or SOMETHING NEW...All I see is bitching.

C'mon, folks. Take things as they are. It's not going to be 1950 or 1970 or even 1990 again.

I do intend to go to the Hamvention next year...for the first time in 30 years!

John

I'll have to agree with this. I found what I was looking for plus an old Allied A2516 tube ham receiver practically given away because it had a blown fuse and missing cover screws. Other than that a great time seeing old friends, alot of new stuff, and the weather was perfect. I don't think Ebay can steal any of that. Maybe it wasn't the best place to find antique radios, but it's a HAMfest and old radios are not the majority of what you find there. If anyone thinks that the crowd is less because of Ebay, wrong!!   Hamfest numbers have drifted downward in the past few years due to diminishing ranks in Ham Radio. Now if this were a computer show you'd see a bigger crowd. In short, you get what you get out of a Hamfest. Just because you don't find alot of give aways at the flea market doesn't mean it's a disaster.   There is always plenty of other things to do. This is true for the smaller hamfests as well.

I'm going to recommend against electronic feedback unless you are a control systems hobbyist... I did PID (proportional-integral-derivative) servo on a homebrew rotating mast so I didn't need a readout and eventually decided to go with a rotation sensing pot, a voltage-to-current converter, and a surplus meter.

This was after I tweaked the PID to get rid of the oscillations but still had some average position errors...

I guess with a digital system it would be easier to optimize. Mine was
all analog... and only one op amp, so the settings interacted :-)

Making the motor go and watching the meter is a more sensitive and
intelligent form of feedback, as long as you've got a system you can't
break by turning too far.

A simple pulse-width-modulator for speed control might be in the cards
though. That way you send a variable duty cycle full-on full-off pulse
train to the motor. Good torque and you don't need a variable power
supply just to run the rotor.

I'm going to add one to my rotator soon... I've got that on manual
right now... pulsing the switch makes a nice slow smooth rotation!

If you do like electronics projects for the sake of electronics
projects, feedback control is an interesting way to go, though.

73,
Dan

I stayed on the west side of Columbus one year [great new motels, great
restaurants], and near Hamilton another year [near to both a never ending
supply of Cincinnati chili and Jungle Jim's] -- worked out great both
times.

It is entirely doable, check here
"http://forums.parallax.com/forums/default.aspx" for ideas on how to implement
your project using a Basic Stamp...
I would do it with digital position sensing, with an lcd display showing
direction of antenna..

Hi Dan,

If anything, going digital has all the prospects of thrashing the antenna into shreds. The oscillations you speak of are eminently suited for an analog solution - you simply have to understand the nature of resonance, coupling (over, critical, and under), and attack. If you don't, translating them into binary code will be impossible.

For instance, your average position errors were probably due to under/overshoot and a too heavily dampened system with too much gain. No computer program is going to improve that.

Hi Dan,

To underline my last point about software, did software prevent this
error? [Hint, eyes were an analog solution.]

Richard,
Agreed on the suitability of an analog solution... I certainly made some steps toward critically damped operation. My circuit design was bad, though.

I didn't have a very analyzable problem; the rotator rotates one of those fiberglass surplus military masts with respect to another, so I get a lot of stick-slip, especially if there's a breeze (there are 12 feet of mast above this thing).

This is not to say a suitable set of P, I and D couldn't be found, and it would have been pretty slick if I'd set up right for empirical loop tuning, but I hadn't done that. I got pretty close by soldering components in and out.

I would have had a better time with a real multiple op amp circuit with a knob for each of P, I and D.

I think you hit the nail on the head regarding too heavily dampened with too much gain in the antenna rotator case. I just couldn't really tune the thing.

In my case, I just decided to throw up my hands and go to the simplest method so I could get on the air with a rotating antenna. I have a quite successful analog servo going every day with my remote antenna tuner (www.n3ox.net/projects/servo). That one is ever-so-slightly underdamped, proportional only, and works nicely. There's a little bit of hysteresis and it certainly could be improved, but I stopped at the good-enough-for-daily-operation level.

I guess what I meant by "going digital" was that depending on whether you're more comfortable with programming than a soldering iron (not me!) you might think about having a simple motor drive circuit and implement the admittedly complex PID loop in software/firmware.

You're absolutely right that you can't do this if you don't know how to do the analog...

73,
Dan

Hi Dan, All,

The single loudest voice on these matters is Robert Pease at National Semiconductor. For streaming courses/lectures on this very topic, visit:
http://www.national.com/nationaltv/index.html

I've been following Bob's no-nonsense contributions for more than 25 years now.

73's

I picked up two 100-piece bags of .1 uF bypass caps for fifty cents apiece
at American Science & Surplus a while back. That's more the exception
than the rule there, though, because they usually know pretty much what
items are worth.

> If you do like electronics projects for the sake of electronics
> projects, feedback control is an interesting way to go, though.

============================
Talking rotor position feedback ,instead of the traditional potmeter in bridge circuit with analogue meter readout ,you could try a low cost synchro system utilising 2 stepper motors from discarded hard drives , dot-matrix printers or flat bed scanners ,with 1 stepper motor mechanically coupled (either directly or via a reversed rotational reducer) to the rotor ,the other in the shack as a readout device. The circuit I found on the web (via Google)needs 5 wires between the stepper motor coupled to the rotor and the control unit ,located with the other stepper motor in the shack.
The circuit includes 4 TIP120 NPN transistors 2 LM324 dual Opamps and a few diodes and resistors. The stepper motor in the shack could either be provided with a rotating or sliding pointer (the latter from an old 1950-60s radio) , or be mechanically linked to a counter (for example from a discarded tape recorder)

A potential 'recycled components' project.

I thought someone here was selling tickets for over a hundred bucks- perhaps
this is for vendors?

$25- is half what it costs to get into AWA antique radio conventions for
it's true that's not too bad. Hosstraders IIRC is still like $12- though :).
I usually go in the Fall as it's not far for me.

John H.

Slow,
It's is a shame you have to:

1- talk like this and
2- have so little respect for others and
3- have no ability to rationally discuss prows and cons complex issues and
4- have a poor understanding of what makes a good ham and
5- have so little understanding some real-world practical aspects of this issue and most importantly...
6- show such poor ham characteristics.
7- and probably have so little real knowledge of ham radio, is my guess.
and
8- be a troll

If you're also a 20 WPM extra, then we can easily do without your immature attitudes and behaviors here and on the bands.

Hey guys! it is also a shame you get drawn into these types and feed their small minds.

73, Steve, K9DCI

eBay rarely enters into my search for antiques and it anything has
sharpened my abilities to find local goods.

Hi Tim,

My electronics skills are fairly good, I have built many projects over the time.
What I was wanting to do, is have a control box in the shack with a readout and left/right controls. And have the provision to also be able to have a PC control it.
I like the Pitch-prop motor, as it is strong, and can be controlled easy.

The way I control it at the moment, is via a 2 voltage system.
The pitch-prop runs at 36volts for full speed, and when I wish to slow it down for small movements, I use a second set of controls at 15volts. Not the best way of doing it, but it works.
I then look out the window and see where it is pointing. I know where N, E, S, W are on my section.

As to price on the parts, I would like to keep it down to around a couple of hundred dollars. :)

Regards and thanks for your input.

Kevin, ZL1KFM

I wouldn't go quite THAT far BUT.... :D

> > Do the $$$ homework boys - you guys that run these ham events
> > are screwin yerselves faster than Barbaro broke his leg last week.

This not only goes for DARA, but also for the local Ham clubs as well.

Furthermore, the local clubs need to wien themselves off of using the local county fairgrounds for their hamfest site too. Problem is, where could they go besides renting out a sizable chunk of the local flea market that EVERYONE (Hams and non-Hams alike) go to?

Cheers & 73 :)

I have decided to do something that some would consider to be a little off the wall. :)

I have decided to put ALL of my Field Day Activities on my website via my cam site. It'll be LIVE and archived in Windows Media format. If possible, I also plan to run a SHOUTcast & Streamer P2P stream as well via Jeeper One Radio, my Talk/Old Time Radio station. It too will be hopefully archived and will probably run in repeat during the overnight hours on Saturday Night.

I plan to operate mainly on six meters USB and probably FM should there be an opening. If not, then I'll probably be band-hopping between 6 and 2 USB & FM with maybe a smattering of 432 USB and/or 446 FM if in the event there is NO six meter opening (Being a no-code tech, I am limited to bands 50 Mhz. and above).

It'll all officially start Saturday June 24 @ 12:00 NOON Mountain - 2:00 PM ET, 8:00 PM GMT and end Sunday June 25 @ 12:00 NOON Mountain - 2:00 PM ET, 8:00 PM GMT with breaks for sleep, meals, and times which the bands just simply are not open and idle.

The websites for everything in question are as follows....

WEBCAM - http://www.freewebtown.com/kb0oxd/webcam.html (Also simulcast on my videos page @ http://www.freewebtown.com/kb0oxd/webcam2.html)

JEEPER ONE RADIO - http://www.freewebtown.com/jeeperone/radio/ (Click on the LISTEN LIVE link)

Hopefully there'll be an opening on six. If not, well then, I guess I'll just be working the locals I suppose. :)

I'll also be logged onto EchoLink and eQSO for those informal non-FD off air ragchew chats with Hams (especially those out in the field with WiFi access). :

So again....That's Saturday June 24 @ 12:00 NOON Mountain till Sunday June 25 @ 12:00 NOON Mountain with the breaks I mentioned above. Feel free to tune in and log on. :)

Cheers & 73 :)

Written with the implicit assumption that you'd want to do it in software, but quite applicable to analog solutions:

Hey Kevin:

http://www.wescottdesign.com/articles/pidwophd.html
http://www.wescottdesign.com/articles/Friction/friction.html

If you want to control it from a PC I'd suggest that you drive an H bridge from a microprocessor, with a PID controller in there to make it go. The biggest key to making a PID loop without doing a bunch of math is to keep your ambition under control -- if you have to go fast, then you need to delve into theory.

As pointed out, PID control can be tricky -- even though I'm a control systems professional there's a good chance that if I did it rev 1.0 would just use the micro to implement virtual buttons, with feedback control for rev 1.1. You definitely want to make sure all the pieces are working before you close the loop.

Hello I'm really new to Qrp and I have, I think, a simple question.
It's common to find kits or schematics for Qrp trasmitter.
But I've not find any mention how to operate a unit composed of a separated receiver and transmitter. For example I've a simple receiver like a Sangean or Sony ICF-7600 with SSB.
I'm able to decode CW with these receiver, with some difficulty but it's possible. Suppose I've a qrp CW trasmitter how i could manage the Trasmitter / receiver switching. I think I must use a sort of t/r circuit to isolate the receiver. I internet I've not found anything about a simple setup like this one.

Thanks and excuse for my poor english

73 Paolo Iw3arv Italy

Sigh.

So I should ignore what he wrote and go searching through the headers
instead? I don't think so.

Yes, Yes, yes,
but what are your thoughts on the following:

No more automatic renewals. Individuals must retest and pass
all elements required for their license class.

The passing score for written exams needs to be raised to 85%.

Code elements should be 13 wpm for General, and 20 wpm for Extra.

Make the no-code Tech license one year non-renewable.

sc

Slow Code <email@no.spam> wrote:

>Yes, Yes, yes,
>but what are your thoughts on the following:

Meta-comment: I think that if all of the ideas you propose were actually enacted into regulation, and then ten years were go by, the United States Amateur Radio Service would be unlikely to have more than 1/4 of the number of licencees that it has today.

That's great if you want to create a "private club" for a few years after that.

However, it's lousy if you want there to actually *be* an Amateur Radio Service twenty or thirty years from now. With so few licensees and as little activity as I think there'd be after such a decimation, the odds are good that a lot of the U.S. amateur radio bands would be "re-purposed" for other spectrum users.

>No more automatic renewals. Individuals must retest and pass
>all elements required for their license class.

Unlikely to pass, due to the cost and bureaucratic overhead.

I'd guess that at least a third of current licensees coming up for renewal would decide not to bother, and let their licenses lapse (and that's in addition to the rate of non-renewal which takes place today).

>The passing score for written exams needs to be raised to 85%.

I'd have no real objection to this. Dunno if it's a good idea or a bad idea.

>Code elements should be 13 wpm for General, and 20 wpm for Extra.

This will never happen, for two major reasons:

[1] CW is no longer an international treaty requirement AT ALL.
    The results of the WARC conferences made it clear that the
    international community considers CW a useful mode, and a big
    part of amateur tradition, but that it's no longer in sufficient
    use in military/commercial applications to justify making it
    a legal requirement for amateur HF licensing.

[2] The FCC has made it quite clear (in their responses to the
    numerous petitions filed about [1]) that they no longer consider
    it in the public interest to require CW proficiency for an
    HF license. They are proposing to remove the CW requirement
    entirely.

In its filings, the ARRL has proposed retaining the existing 5 WPM requirement for Amateur Extra. The FCC's response adds up to "No. Not justified. No CW requirement at all."

My understanding is that the ARRL's comments received from their membership, and the comments received directly by the FCC in response to the various petitions, are pretty consistent. Only a small percentage of the people who have commented, feel as you do. Most commenters either want to eliminate the CW requirement entirely (as many other countries have done), or eliminate it for General and retain it for Extra.

What you propose is also unlikely to happen because the FCC and ARRL both remember what happened the last time they tried tightening the rules and raising the requirements and trying to force people to upgrade. My understanding (from reading - I wasn't licensed back then) is that the Powers That Be concluded that this sort of incentive licensing pressure created more resentment, and did more damage to the health of the amateur radio community, than whatever benefits came from it justified.

I've read statements from the FCC, over the past few years, to the effect that they're just not interested in taking operating privileges away from anyone.

>Make the no-code Tech license one year non-renewable.

Once again, I think that the number of licensees that the Amateur Radio Service would lose (or would never get in the first place, once people learned of the non-renewable status) would outweigh the possible advantage of this approach (giving licensees more of an inducement to increase their level of knowledge, and upgrade).

sc,

Lesee... Well, I believe you have some discussable concepts here.

In other areas there are currency requirements. Flying, for example. If you haven't kept up, you need refresher flights with an instructor. We first try to outline what is gained / lost over time and whether re-testing can address these issues. Old timers will be required to learn about QPSK and all the modern concepts.

Then we go from here.

One general area you seem to fail to address is some of the practical aspects regarding number of licensees and the viability of retaining the Amateur Service all together. If the number of Hams keeps declining, will there be ANY licenses...and do you (in general) want to preserve something, or kill it all if numbers fall, manufacturers stop producing products, etc... This can not be ignored in the rest of the discussions.

I know Extras who couldn't build a thing, yet are active, intelligent and law abiding. They have interest I can discuss with them. I also know no-code'ers that are the most serious hams around...not to mention several that came from CB and are now died-in-the-wool-hams.
I also hear Extras on the air that should aim for a tree the next time they drive a car.

Is learning CW a "right of passage" and an effort that helps to strengthen the Ham...yes...for some. Does it guarantee an excellent, expert Ham? Not by a long shot. That comes from elsewhere.

However, based on the post of yours that I responded to, I choose not to go further since you have demonstrated such a poor attitude, I feel it is not worth the time exploring with you. Ill pick more important battles. Enjoy your Hamm activities (if you have any) and be content. you brand or devisiveness accompliches nothing except, perhaps allowing a few of the responders to vent and possibly hear (though by accident) some reasonable points.

Do you have a call, name? With a pseudonym like yours, I'd think you'dbe on the other side. What are you affraid of?

73, Steve K9DCI

> The passing score for written exams needs to be raised to 85%.

How about the licence grade depending on the score? How about much more strict requirements for on-air procedure. I hear many who have licenses and still don't know how to communicate efficiently in emergency drills or ID properly.

> Code elements should be 13 wpm for General, and 20 wpm for Extra.

CW only was a requirement due to international treaty in the first place. That is no longer the case. You are clrarly hung up on CW. WHY? What does it bring / guarantee? Why is CW so much more important that all other aspects of on-air operation?

> Make the no-code Tech license one year non-renewable.

This still comes directly from the "CW or nothing" concept.
73 (in the truest sense)

Saluti, Paolo. Potete utilizzare un interruttore dell'antenna. Avete bisogno di un interruttore con tre collegamenti totali. Uno per la ricevente, uno per il trasmettitore ed uno per l'antenna. Quando vi sentite IN SENSO ORARIO e siete aspettate per trasmettere, passare dalla ricevente al trasmettitore. Molto facile fare questo senso.

Greetings, Paolo. You can use an antenna switch. You need a switch with three total connections. One for the receiver, one for the transmitter, and one for the antenna. When you hear CW and are ready to transmit, switch from the receiver to the transmitter.

Very easy to do this way.

Today the Flea at Dayton is less than 1/3 full .. where up until about 2000 you had to have someone die and will you a flea market space to get into

the place... too many of us tired of the "Aisle Police" and the "Tent
Police" and the "Door Police" and the Trotwood Firedept won't let us
do this and that and the other thing... plus the hotels jacking the rates
of 40 to 60 buck rooms up to 150 a nite with 3 might miniumum...
Sorry but this was my 2nd year NOT to attend...
John k9uwa

Well, that pretty well kills off the casual attendees that are essential to bring fresh blood into the event.

And although the $25 might not put off the hardcore hamfester it does put off a lot of the 'regular' people that are the foundation of the event. Add $3 gallon for gas for a guy from Indiana who has a few radios to sell and doesn't care if he makes a buck or not on the radio but now he's out of pocket some actual cash money. Much more than taking the family to a movie and buying popcorn!

C'est la vie.

I think a lot of these hamfest promoters figger on pricing themselves as some sort of 'event' rather than just a big swap meet. It doesn't seem to work that way anymore.

-Bill

It isnt just Dayton, its nearly all hamfests.  Check out what they are
doing to Ham Comm in DFW area this year.  48 flea mkt tables vs usually
about 300!!  They made sure it would fail.

The number of new products released tells it all. Whats new, absolutely
nothing.

The worst part is the  price of all this old junk, some people think
buying old junk should cost more than gold nuggets or close to new
prices. Collins mania must have spread into old junk parts. Amps parts
especially!

The biggest joke was RF parts like vacuum variables, "what you want $200
a piece with no warranty! Same comments apply to tubes. You might as
well buy new or from one of the reputable dealers who will give your
money back if its a dud.

That was at the door. If you pre-purchased, it was $20. Is that a lot of money for what is still the largest hamfest on the planet? I was there this year, and the place got picked over quickly. I'm sure there was little left by Saturday. I brought 3 radios to put on my brother's table, and they were all sold within 2 hours for more than I would ever have gotten at any of our local radio meets. So,for me anyway, while it may not be what it was compared to previous years (what radio meet is?) I still find Dayton a lot of fun, and well worth attending. Blame eBay if you like, but the fact is that there is very little new blood coming into the hobby, and the old blood, is-well-getting older.

Sure!!

HamComm charges $10 admission, like Dayton charges $25
a head to get in. Their pricing themselves clear out of the
market! Then add in the price of gas and food and is it any
wonder why hams are staying home and ordering their
radios onlive via e-Bay or elsewhere ??

It's actually cheaper to go see a Major League Baseball
game live admission than it is to go to a stupid Hamfest.

Do the $$$ homework boys - you guys that run these ham events
are screwin yerselves faster than Barbaro broke his leg last week.

After having spent a couple mos attending local AR sponsored swap
meets, I figure the "doors open" buyers are there to score deals they
can turn around and put on ebay.

And the "they" is not always the involved ARC.  A local club here got
kicked to the curb by the local community college and now have to
stage their long running monthly swap meet at the rodeo grounds in a
dirt parking lot.  That killed off most of the computer vendors and
literally cut the size in half.

```

After reading all this, and with the recent Kutztown event in the background, as well as my three weekend finds, I am not so sure eBay has much to do with anything as to radio prices or availability. This is based on several assumptions which I will list for correction/addition/amplification:

a) the west, southwest and south in general suffer from a dearth of good radios. This has been the case for the over 20 years I have been in the hobby and remains the case today. Exceptions include Florida & Maryland... stretch to make MD a 'southern' state although it is below the Mason/Dixon line.
b) the Pacific northwest suffers from the same lack to a lesser degree.

With this in mind, eBay has always been a presence in areas where the natural crop is limited or non-existent. This group will typically have a view of radios that is wildly distorted in price, as they start with the "everything costs $15" mentality based on shipping alone.

As one moves east especially into (former) wealthier parts of it, and around older major cities (Chicago, Minneapolis, Detroit and so forth), radios become thicker and thicker until one hits the East Coast, where even the most limited multi-family garage sale will offer a few examples of *something* loosely described as being related to the hobby. Then, at Kutztown, the typical $30+shipping eBay brown bakelite radio goes in the $15-if-that range at the end-of-meet auction. And the $229-for-a-common-RCA (albeit polished to glow-in-the-dark proportions) simply does not happen.

So, it is "all according to" location and opportunity. Kutztown is a free-to-the-public event held at a major Farmers' Market/Antique Market that also has weekly tables for anyone selling. Accordingly its attendance is disproportionately large and consists of a disproportionate amount of the "general public" walking through out of curiosity and because they were 'there anyway'. This would not happen at a destination-event if only because of the lack of general publicity as much as the uninterested public would never go nor have any reason to even be proximate that they might go. And, of course, the admission fee would deter those few that did happen to be straggling nearby.

I will also state for the record that Kutztown had _at least_ thousands of radios in all states, of all types and in all price ranges, from high-end, high-tube-count consoles through lovingly restored tabletops through standard junk. The peripheral events are limited... no hotel-banquet-hall lectures, but those few were directly on-point and even of interest to non-radio people (The talk on Crystal sets, for example).

So, from purely anecdotal evidence, it appears that those venues where the general public is not actively solicited, those venues that are 'preaching to the converted' are shrinking. Those that do solicit the general public, those that run at (apparently) a much lower key appear to be growing. The two local examples would be the DVHRC-sponsored events (Kutztown, PA) and the NJARC-sponsored events (Hazelet, NJ). Those of you that go to the NEARC events in Nashua, New Hampshire... how are they doing? I hear from some acquaintances that they are doing quite well? And I also hear that Rochester is a mere shadow of its former self? Is this true?

In any case, I remain of the general belief that eBay is not a significant factor in the hobby to those in the east. And to those in the west or out-of-range of large, older population centers, it has _always_ been a factor, neither more nor less much than now.

The thoughts of others are actively solicited!

Peter Wieck

Amateur Radio Manufacturers and unfair pricing!

Here I sit the day after Dayton, calling around to all the dealers looking for a HF Transceiver. There were some fantastic prices offered on equipment (As much as $500 off list), and the dealers are back to charging full price today.

I am told by the dealers I called, that the Manufacturers were making deals with them so they could sell there inventories much cheaper, and the orders had to be taken at Dayton. Today, the day after when most of these orders had not even shipped yet, they are back up to full retail price.

To be fair, Manufacturers should allow these prices for a time period after Dayton to give other Amateurs who could not drive to Dayton an opportunity to get the same deals.

I think we should all write to them and let them know how we feel. This is unfair !

According to the snowbirds from the New England area, Florida is the southern tip of new England. :(

  So, you're saying that the price hasn't changed that much since I left
Ohio in the late '80s?  Do you think that they get Hara Arena for free,
or all the cops and bus service for park and ride?

good points.

The local flea markets here, always seem so barren of good stuff. So I managed to get to one 35 minutes before official opening time.

I was surpised to see the smart buyers already walking out with boxes full of all the good stuff !

The best items sell, as the spots are still being set up.

Regardless, Dayton was packed with attendees. You could barely move at times in the indoor exhibits on Friday.
Parking lots were full, there wasn't a hotel vacancy anywhere, etc.

> It's actually cheaper to go see a Major League Baseball
> game live admission than it is to go to a stupid Hamfest.

Not for a Chicago Cubs or White Sox ticket. No way.

> Do the $$$ homework boys - you guys that run these ham events

What would you have them do? Operate the meet at a loss?

No, I'm not affiliated with them. But this company has a promotion going this summer that you get a free qrp transmitter (it's not a kit) if you buy one of their portable dipole antennas. Here's the promotion page:

As a rank newbie (not even licensed, yet) I more or less have to agree. Here in the San Francisco Bay Area (SFBA) where there are at least a couple local ARC swap meets per month, I see none of the stuff found on ebay in the way of classic old ham equipment. Hell, I can't even find a used morse code key to practice on. I'm gonna hafta buy a new Ameco from HRO. Not quite sure exactly why this is. Perhaps most of SFBA ppl are all digitally oriented due to Silicon Valley being the original hot-bed of digital. Whatever the reason, old Collins, Drake, Heathkit, etc, rigs are rarer than cheap gas and low real estate prices.

On the positive side of the ledger, due to the glory days of the late great SV, there's hardly a man or woman alive in Northern California that can't fly a Fluke or wield a mean Weller. I'll be flogging my own acid-free flux and have already bought my first QRP kit with my eye on another.

Why don't you just tell them to keep the low prices all the time!

If they gave you the low price, then they would have to raise the low prices at the show.

I have to agree. I got to Dayton last year shortly after
the opening, and there were already some R5000's

and some beautiful old Hallicrafters that already had
"sold" tags on them.

I've gone 5 of the past 6 years.
4 years ago there was a tent full of old AS/400 CPUs.
Less of that this year. Still, a lot of junk every year.
People wanting high-dollar for very-worn equipment.
That was disappointing.

What gets me is the guys selling bootleg MS software for big bucks.
Illegal as all get-out.

But tolerated, apparently, by HamVention.
They could get in big trouble.
That would be sad.

But it's not the only way that the WWW has changed Dayton.
It's changed the whole of communication.
Repeater/IP connections may be nifty, but they're not radio.

Collin

Maybe it has something to do with the number of people hit by a car or truck, and the number of other accidents they cause when they step out in front of a moving vehicle. I've seen quite a few wrecks going to, and leaving large hamfests that could have been avoided by keeping foot traffic away from the vehicular traffic.

Internet based sales have a huge advantage over in-place sales like Dayton. Ebay and other sales sites can as we all know bring sellers from around the world at any time of the day. It just isn't possible to get that kind of coverage at an arena in Ohio.

To the extent that buyer and seller are honest (and most are) internet sales work very well because money and the good to be sold have to be moved only once.

It is for the exact same reason that in-person antique shows are having a hard go of it.

I am a new Ham and have been to two ham fests this year put on by local clubs. Very disappointing. I thought maybe I could get some used equipment
since I had none. If I had been looking for 23 channel CBs or obsolete computer junk I would have been all set. I thought selling old 23 channel Cbs was illegal because of the power.There was a real dealer at the one so I got a new VX 150 from them.Got home and there was no paperwork in the box. Went back to get it at 11:45 AM. The thing was suppose to last till 1PM.
Everyone was already packing up all their junk.This dealer had no time to find my manual and stuff and said they would mail it.Took 2 weeks. Lucky for me I found a manuel on line. I'll still try different ham fests but if the granddaddy was a bust I don't know about the small clubs.

E-bay and other on line auctions can never replace spotting a part or
piece of equipment you need that isn't worth the dealers time to list,
or would cost too much to ship. More than once I've asked about
something and was told to take it, so they didn't have to haul it home.
I've never seen an E-bay listing giving something away, and paying the
shipping to your door.

Shuuuu, don't tell everyone. That's half to reason to get a
flea market space. That way most of the time you get in
before the general public and scoop up the good deals....

You have a point there - not that I totally agree with the poster you replied to. I've had some real bargains "handed" to me so they didn't have to be hauled home.
Actually, each venue has its own place in life. Problem with Dayton and other hamfests is between fuel costs and so on - there are more and more factors involved keeping people away. Ham radio itself isn't what it used to be. Then, some clubs who've had them - as I've heard it - had inner battles as to how things are to be done and so on. So club politics played a part

along the line. I'm sure we could list many reasons for failures as they're being seen. Question is, who has the "answers"? Times are changing. Things change with time and I see it here in my own town - People DO NOT like change. I'm sorry to see some things go too - but there's not much you can do about some things.

Clearly Ebay and other internet sites won't completely replace in person sales, be it a hamfest, garage sale or estate auction. But the ease of bringing large numbers of buyers and sellers together via some internet connection has had a significant impact on brick and mortar operations. The ease of transacting a sale electronically be it for a Kenwood 940 or a spinning wheel can't be ignored. And the sellers that fail to react in some way will be left behind.

```

I have a friend who's a professional flea marketeer, he told me that
for an 8 AM opening time, he's already walking around at 6:30 AM buying
stuff- and by the time the public gets there, the stuff that's worth
$200, that was selling for $25-50, is gone- other marketeers already
bought it

then, they put it on ebay when they get home

what doesn't sell, goes back to the market 2 weeks later

constant cycle

the average joe can get lucky here and there, and find some stuff under
bushels, etc., or from someone that set up late, or someone that
finally moved off a high price

but for the most part, the VERY early bird, gets the worm

anything you see sitting at a flea market late in the day, was most likely already tried on ebay, and didn't reach reserve, or got no bids. sometimes you'll see stuff at flea markets that seems valuable, and underpriced, and no one is biting

that's cuz the marketeers already know, that particular item is hammered on ebay, too many listed, and the price is down- so they are cutting their losses and just dumping it

marketeers will tell you, they'd rather sell it cheaper at the show, than for slightly more on ebay- because of ebay and paypal fees, and packaging work involved- and nitpicking assholes like DeserTBob on EBay, who want gold for a penny and free shipping

Nope - old 23 ch CB's are 5 watts, too, and perfectly legal.

The granddaddy was not a bust, it was awesome. Had a great time (always do).
There was about anything you could want, I think, either used out in the flea
market, or new inside the buildings.

"John S." wrote:

> Clearly Ebay and other internet sites won't completely replace in person sales, be it a hamfest, garage sale or estate auction. But the ease of bringing large numbers of buyers and sellers together via some internet connection has had a significant impact on brick and mortar operations. The ease of transacting a sale electronically be it for a Kenwood 940 or a spinning wheel can't be ignored. And the sellers that fail to react in some way will be left behind.

Yeah, right. What about the people who don't even have a computer, or don't trust online transactions? They'll never go near E-bay.

You snooze, you lose.... I buy *most* of my new toys at hamfests from a specific dealer. I call them a week or 2 *before* the hamfest and give them my shopping list, and they give me a great price with the added benifits of no shipping or sales tax. Maybe you should try it some time. FWIW, I couldn't afford to take the time off of work to go to Dayton either...it would have cost me too much in lost sales.

I think Peter is pretty much right with his observations, Project sets are plentiful in the Northeast and upper mid west, and the West coast folks are really desperate! I very seldom buy on ebay, but do keep a watch on things. The only things I ever buy are large pickup only consoles that are close by. Most of the Restored stuff I sell ends up in the deep south or on the west coast, the Cost of living is so high in California that a Nice restoration at Retail WITH shipping across country is still a bargain out there.

"Peter Wieck" <pfjw@aol.com> wrote in message
news:1148312047.828984.28290@38g2000cwa.googlegroups.com...

> After reading all this, and with the recent Kutztown event in the background, as well as my three weekend finds, I am not so sure eBay has much to do with anything as to radio prices or availability. This is based on several assumptions which I will list for correction/addition/amplification:
>
> a) the west, southwest and south in general suffer from a dearth of good radios. This has been the case for the over 20 years I have been in the hobby and remains the case today. Exceptions include Florida & Maryland... stretch to make MD a 'southern' state although it is below the Mason/Dixon line.
> b) the Pacific northwest suffers from the same lack to a lesser degree.
>
>
> With this in mind, eBay has always been a presence in areas where the natural crop is limited or non-existent. This group will typically have a view of radios that is wildly distorted in price, as they start with the "everything costs $15" mentality based on shipping alone.
>
> As one moves east especially into (former) wealthier parts of it, and around older major cities (Chicago, Minneapolis, Detroit and so forth), radios become thicker and thicker until one hits the East Coast, where even the most limited multi-family garage sale will offer a few examples of *something* loosely described as being related to the hobby. Then, at Kutztown, the typical $30+shipping eBay brown bakelite radio goes in the $15-if-that range at the end-of-meet auction. And the $229-for-a-common-RCA (albeit polished to glow-in-the-dark proportions) simply does not happen.
>
> So, it is "all according to" location and opportunity. Kutztown is a free-to-the-public event held at a major Farmers' Market/Antique Market that also has weekly tables for anyone selling. Accordingly its attendance is disproportionately large and consists of a disproportionate amount of the "general public" walking through out of curiosity and because they were 'there anyway'. This would not happen at a destination-event if only because of the lack of general publicity as much as the uninterested public would never go nor have any reason

> to even be proximate that they might go. And, of course, the admission
> fee would deter those few that did happen to be straggling nearby.
>
> I will also state for the record that Kutztown had _at least_ thousands

Ah, Ron....

RANT WARNING

You need to understand the essential difference between a "Flea Market" and a Hamfest or Radio Meet. Fleas are just that. Locations where mostly crap is redistributed amongst a few, and mostly Chinese Junque is sold at no-better-than- Cosco or Sam's Club prices, but somehow the appeal is the 'story' and perceived bargain vs. the actual reality. Those that do it "professionally" (NOT ALL, mind) are in many ways the cockroaches of society inhabiting the dark corners and hiding under filth to avoid paying taxes and to skim from society without paying any freight. I once was present when the State Police together with the FBI and quite a number of local police groups raided the Pennsauken (NJ) Drive-In flea-market. They focused _only_ on the 'professional' dealers, some 90% of which (a line of handcuffed mostly-men that stretched over 100 yards, shoulder-to-shoulder) were selling all/some of the above: Stolen goods (Wonder where that "Sears Craftsman" or Still-in-the-Clamshell Channel Lock or Klein or Mac or Snap-On comes from?), knock-off goods, illegal goods (baby clothes not fire-treated, recalled tools and/or appliances), mislabeled goods (made in USA... NOT), pirated goods and so forth. And the Feds were there for the Tax-Evasion stuff as well as the across-state-lines stuff. The 20% of the dealers that were in it for the weekend, cleaning out the attic and the like were entirely ignored. Very damned little of it any more has anything to do with "recycling" used goods. Yard sales and garage sales, church bazaars and such are about the last refuge for that kind of thing. But keep in mind that every time one buys something stolen or a return or a recall or a torn-cover paperback at a flea, one is quite directly taking someone's job away, usually right here in the good old USA. Who gets sued if a recalled defective Craftsman or Stanley or Klein or Channel Lock Tool sold at a fleamarket hurts someone? The "vendor" that stole it and resold it? Not hardly. And whose prices _all_ go up as a result? Ours. And is it Chinese manufacturers that go out of business due to overhead costs? Nope. But, very damned few of us think about this stuff when we see that tempting tool on the table. "We" figure we can buy it at the flea, then take it back to Sears if it breaks.... GOOD thinking.

On the other hand, there are "shows" dedicated to certain hobbies. My approach to a 'timed' show (opens X and closes Y) is to not sell _ANYTHING_ except as-marked before the show opens. I tell people that I will negotiate price one hour (1hr) after the show opens officially, but not until then. Period. And when someone askes me what is my "dealer price" I add 20% automatically. But that is *just* me. Once upon a time, one dealer at Kutztown, very early on when it was a 1/2 day affair was all over me as I was unloading. And as this individual would easily have made three of me (no kidding, and I am 6'-3", at 220lbs) it was annoying to say the least. He was picking stuff up, pulling stuff out of boxes, turning stuff over (and leaving it) and such. All the while pattering on how ridiculous my prices were. At the time, I had sprained an ankle and was using a blackthorn stick just after sitting or driving until I loosened up. I actually had to raise it and call for witnesses before this particular jackass moved on. At the end of the day, I drove home with a full pocket and an empty vehicle. His load was still with him, literally and figuratively. I will not say that my raising a very loud stink to get him off my stuff had anything to do with that, but I would like to think so. I had a 'pot' to support the hobby for another year. It has pretty much been that way ever since. I cover my costs, and turn over my radios keeping fewer and fewer, but nicer and nicer radios, and fewer-but-very-much-nicer audio systems.

So, it is all in accordance with how one behaves, how one sees the world and how lady luck sees you. I have found as many bargains in the last 30 minutes of a flea market as getting there before set-up. Mostly I am buying for my own use and pleasure, resale is at best a tertiary concern even if that... This is a HOBBY for me, the moment I feel I am becoming predatory, buying for resale or otherwise treating it like a business, I take a deep breath and walk away. THAT IS ONLY ME. Others are free to behave as they see fit. But I want to be able to look any of my buyers in the eye years later and get a smile in return.

END RANT

Peter Wieck

The local HRO store claimed to have "Dayton prices" last weekend. I
didn't buy a radio so I don't know how good the prices were.

They usually have prices below the "sticker" price.

Jack Hamilton
jfh@acm.org

Though in a state of society some must have greater
luxuries and comforts than others, yet all should have
the necessities of life; and if the poor cannot exist,
in vain may the rich look for happiness or prosperity.
The legistlature is never so well employed as when they
look to the interests of those who are at a distance
from them in the ranks of society. It is their duty
to do so; religion calls for it; humanity calls for it;
and if there are hearts who are not awake to either of
those feelings, their own interests would dictate it.

Sir Lloyd Kenyon, Rex vs. Rusby, 1800

Did anyone get pix of new Elecraft offerings?  Eg, power amps?  Care to
share them?
```

Was SteppIR there?

How about HiQ antennas?

These are my interests, anyway.

were we at the same Dayton?

It was my second one in five years.. $300 flight. $97 rooms at a Marriot
and $ 75 for an Avis rental.

Great time, lots of stuff to see and would have bought a lot more if I had
not flown in.

I think that the hamfests are down since the 80s and 90s but I also recall
those fests had a ton of used computer dealers, so the number may have been
artificially inflated as the way of build your own computer went away and
those guys left.

Sure there was some overpriced stuff and they did not move. But there were
some very reasonablely priced things that did.

I'll be back again in 3-5 years.

I think Pat Robertson, Jerry Falwell and their ilk fill the bill.  Also
Former Attorney General John Ashcroft (but what a GREAT singer!)

I have a new HT Vx7R and I can only transmit voice message in a few band width. For example, between 50.000 and 54.000 MHz, between 144.00 and 148.000 MHz, between 220.00 and 226.000...I would like to know if it is really this way and what are the bands of frequency that I can transmit.
Roberto

Was looking for some thoughts on a problem I am encountering with my new Icom 208h mobile. I mounted it in my truck yesterday with the remote control unit on my dash and the actual radio mounted elsewhere in the vehicle. When I powered it up this morning, I noticed that some segments on the display were partially lit that shouldn't be. For example I have an alphanumeric name on one of the repeaters, where the forth character was an 'H'. The display was showing an extra segment across the bottom of the 'H'. There was also a "sql" icon near the top that should not have been showing. The erroneous segments were not black like the others, but at about half intensity. After about 10 min or so, the display cleared up and was normal. After the radio is powered off for a while, if I turn it back on, it will do this again.

I have already programmed the radio, so I do not want to be too quick in doing a full reset and I am not sure this will help anyway. Does this sound like a defective display or could something else be causing this?

Many thanks and 73,

Darryl

Where do you live?
Do you have an amateur radio ("ham") license?

The frequency bands you mentioned are reserved for use
by licenced radio amateurs in virtually every country on

this planet (Earth). It is almost certainly illegal for you
to transmit on any of those frequencies in your country.
Get a ham licence and learn what you are doing.

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

CHECK OUT BILL'S NEW WEB SITE:
http://www.gadgeteer.us
Please feel free to link, bookmark, and send feedback.

Topics discussed in SolderSmoke #22:

-- Mike's RF amplifier struggles
-- Good RF citizenship: Bill installs LP filter
-- Loads and power out in RF amps
-- Bill's amazing UK hamfest (rally) adventure.

-- Fun with lasers and UV
-- Doomed to build a Binaural receiver
-- Website update, Google and Amazon ads

Listen at:
http://www.ourmedia.org/node/223906

Background:
Tired of listening to Led Zepplin or NPR on your I-Pod? Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software. We've been having trouble with our Ourmedia RSS feed, so Mike (software wizard that he is) has homebrewed his own RSS feed. In order to subscribe to SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.ourmedia.org/node/223906

Here's the homepage for our show. All our programs are available here. There is also a blog and links to some of the sites and documents we've been discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us feedback.

73 from London
Bill M0HBR N2CQR CU2JL

None of the frequencies on that HT are legal to
transmit without a proper license.

FS: Dentron MT-3000A Antenna Tunner
High power tuner and works great and looks great also.
Has one minor problem.  The little plastic sleeve on the Transmitter
matching knob is no good.  Its a small plastic sleeve that goes into
the knob.   Again, the knob is fine, its just a small plastic insert.
I have two and just need one.
Price: 225.00   Shipped and insured to the lower 48 Stated.
I take paypal.

This sounds like a defective display, display-driver, or a bad connection between the display itself and its driving electronics.

Another possibility is that there's a "contrast" adjustment for the radio, and that the constrast-adjustment circuit is mis-set (or the contrast control is somewhat dirty).

All of these are problems I'd more expect to see in a used product. It's not all that unusual for radios (and other consumer-electronics devices) to develop LCD segment problems, due to loosening or oxidation of the contacts or cables connecting the LCD to its driver. Unplugging and replugging the cables, careful cleaning of contacts, etc. can sometimes fix these problems... but these fixes are not for the novice to try, and should only be done if you have the radio's service manual and a proper set of tools.

If it's a new unit, I'd recommend returning it to the dealer and requesting an over-the-counter exchange,

Please email mail this to your Division Directors and Section managers.
With a loud voice, maybe we can get the ARRL to work for us instead of
against us:

No more automatic renewals. Individuals must retest and pass all elements
required for their license class.

The passing score for written exams needs to be raised to 85%.

Code elements should be 13 wpm for General, and 20 wpm for Extra.

Make the no-code Tech license one year non-renewable.

sc

This sounds like a great way to kill off amateur radio.

> Code elements should be 13 wpm for General, and 20 wpm for Extra.
> Make the no-code Tech license one year non-renewable.

Um, haven't you been following what is going on in the rest of the modern world? Code is dead in most first world countries, and in a few months it will be gone in the U.S. too.

This personifies why the Amateur Radio Service has lost an entire generation of new members as well as why the average Ham is aged 62.5 years old.

It also goes far in explaining why fewer Emergency Operations Centers managers look upon Amateur Radio as a viable means of support during an emergency.

This thinking truly puts the "amateur" back into the Amateur Radio Service.

This is a perfect example of viewing the future through your rear-view mirror.

All in favor of that should respond to the relay league with their vote for the continuance of CW as a "filter" ; in spite of the decisions already made during the WRC03.

It has already "filtered" out the expertise of those receiving the most up to date training in digital communications.

Show your level of understanding of the current situation; vote for the continuance of CW as a requirement for the death of the Amateur Radio Service.

You better do it quickly; the ARRL has already announced new testing material being released for exams administered after July 1st, 2006.

Wink, Wink - Nudge, Nudge

The Code is dead; long live the code....

Nice troll.   (...worthy of the late Polly from 14.313)

It would never REALLY happen you know.

If hams were ever forced to re-test when their license
was up for renewal, no doubt WHATSOEVER in my
mind that 75% would drop out from Ham radio.

Even the guys on 10 Meter FM working Repeaters and
28.600 simplex what scanner listeners and SWL's monitors
tune into would dry up overnight.

Apart from that ARRL only represents 20% of all
USA at best. Most people know that they are nothing more
than a publishing house which landed a 501C-3 Tax free
status via claiming to be a technical resource and training
NGO org. What a load of sheer bullshi++ery.

Arrl could go belly up tomorrow and it wouldn't
be worth a cup of coffee with Habib Patel at
the local Dunkin Donuts.

No way. Your proposals are, in general, not reasonable.

> No more automatic renewals. Individuals must retest and pass all elements
> required for their license class.
>

Actually there are NO automatic renewals now. You must apply for the
renewal. There's really no need to retest.

>
> The passing score for written exams needs to be raised to 85%.
>

Why? It's been 74% as far back as I can remember.

>
> Code elements should be 13 wpm for General, and 20 wpm for Extra.
>

The original code test back in the earliest days of licensing was only 5wpm. It would be nice to have the 13wpm as a requirement since that's the speed at which most people can't count the dits and dahs but those who use it will get past that anyway. The 20wpm was only icing on the cake so don't see a real need for it. Those who get to the 13wpm will get to the 20wpm if they use it much. Although I advocate keeping code testing, we need not reinstate the 20wpm in my opinion.

>
> Make the no-code Tech license one year non-renewable.
>

Pointless change. Many people don't gain enough experience or get together enough of a station in a year to know if they want to continue.

Dee D. Flint, N8UZE

be afir it once meant something becuase morse wsas all there was but it
has meant little in my lifetime or your Todd meant fairly little even

in the lifetimes of the ham that scream for it

I used to really enjoy the ARRL handbook. I used to purchase a new one every so often here in Australia. I think the best valve ones were in the late 80's and then naturally it slowly evolved to semiconductors, integrated circuits and printed circuit boards and more sophistacted circuits etc.

I think the old days of truly making your own receiver and or transmitter are allmost gone.

I have become old any eyesight is now growing dim! I guess the days of voltage doublers running straight off the mains because one was too poor to buy a suitable power transformer are gone. I do like the thought that the highest voltage one would come across now is probably 12 volts dc.
Many a time I forgot to turn off my carphone and 8 hours later I would come out from work with a truly flat car battery.

When I look at some of the modern Ham gear I am amazed at how complex and tiny they have become. I supposed all we really have left now is making aerials and dxing.

Next time I am in the city I must checkout the latest ARRL Handbook as
I still enjoying reading them in bed.

Jim McCardle ex VK3ZOE in Australia. jmccardl@bigpond.net.au

Has anyone ever succeeded in controlling a pcr-1500 from a linux box? The controlling software per se runs smoothly inside the dos/windows emulator "wine" under linux, but is doesn't "see" the USB port.

Three options in front of me:

- write the USB driver under linux (pain!)

- cheat and use a tty (com) driver and redirect it on the USB port
  (not sure the controlling software would cooperate...)

- find someone who already found a solution and is willing to share...

I'd love the third option.... 73s from sunny Italy,

You only say that because you had to struggle to get the 5 wpm code
required now, Toad.

"This is a perfect example of viewing the future through your
rear-view mirror."

I view many things through my rear-view mirror these days. It's a
better view, for the most part. Perhaps amateur radio would be better
off dying a slow death, rather than becoming completely bastardized.

I am not sure it would be fun to take all the elements from back in
the the 60s, every four years, though.

No, I am no longer an ARRL member....

Win, w0lz

so?
 and if thpeople like steve were correct that would eman that Todd is
mericalously converted to a fine operator, and heis opertiors skill
changed not a wit meaning anyway you look at morse code testing does
nothing for the ARS

I just knew none of you rotton scum would help. You Gotta have your free handouts don't you. ARRL pampered you well. I'll bet you all pay for your food with food stamps and talk on CB all day long from government assisted project housing.

Assholes.

The real demise of ham radio is not from dropping the code, but from making it such a elitist group that nobody wants to join. There is safety in numbers. We need to make the numbers bigger not smaller.

Good point.  It is true that the original Morse code was merely clicks
and spaces on wired telegraph systems, similar to the tap method you
suggest.  I see the advantage that by tapping slowly, anyone who knows
the scheme can copy.  This is also true of Morse, of course.

You might also try "Cedega", as they are the best "Windoze" compatable emulator for Linux that I know of. There is one other thats mainly geared towards running "Windoze" office applications... But for the life of me, I do not remember the name of it..

Also there "should" be some Rs232 compatable adapters out there that will run under "Wine/Cedega/VMware" that you could adapt to programming the scanner...

I have moved my junkbox surplus stuff to a new website.
http://www.hamradparts.com

1N4148 Diodes $3.00 for 100, $4.00 for 200
1N4001 - 1 Amp 50v General Purpose Rectifier Diodes - $3.00 for 50

33pf NPO Caps, SMT 0805, 50V - $3.00 for 100
150pf NPO Caps, SMT 0805, 50V - $3.00 for 100

220pf NPO Caps, SMT 0805, 50V - $3.00 for 100
390pf Caps, SMT 1206, 50V - $3.00 for 100
1500pf NPO Caps, SMT 0805, 50V - $3.00 for 100
3300pf Caps, SMT 0805, 25V - $3.00 for 100
.1uF Caps, SMT 0805, 50V - $3.00 for 100

SPECIAL SMT PACK - 50 of each listed value $9.00
350 total parts

2N3704 NPN TO92 - 20 for $2.00
2N2907 PNP TO92 Package - $4.00 for 50
2N3904 NPN TO92 Package - $4.00 for 50
2N2222 NPN TO18 (metal) Package - 5 for $1.00
MMBT4403 PNP SMT transistor - 50 for $4.00

SPECIAL: 100pcs PN2222A Motorola $7.00- FREE SHIPPING

2N2222 NPN TO92 Package - $4.00 for 50
The 2N2222 is a bulk transistor...meaning the part is not labeled.
They ship in a Zip Lock packet and the packet is clearly labeled.

2N3906 PNP TO92 Package - $4.00 for 50
The 2N3906 is a bulk transistor...meaning the part is not labeled.
They ship in a Zip Lock packet and the packet is clearly labeled.

IRF510 - MOSFET AMP TO220 - 4 for $5.00

Crystal Ladder Filters anyone?
3.575611 Mhz HC49 Crystals - 5 for $2.00
4.9152 Mhz HC49 Crystals - 10 for $3.00
9.830 Mhz Crystals (SS2 package) - 20 for $3.00
LM7805ACV 5v Positive Voltage Regulators (TO220) 5 for $2.00
LM386N-1 - Audio Amp 6 for $5.00

Sticky Back Rubber Feet for your projects, self adhesive - 8 to a strip - 2 Strips for $1.00

Panasonic Wall Warts - 12VDC, 500mA (center negative) $6.00 each
If you need center positiove, cut off the end and reverse it. I use these to power my
rock mites, my TT2, and all of my homebrew test gear.

8pf NPO Ceramic 50 for $3.00
11pf NPO Ceramic 50 for $3.00
12pf NPO Ceramic 50 for $3.00
22pf Ceramic 50 for $3.00
470pf Ceramic 50 for $3.00
560pf Ceramic 50 for $3.00
.1 uF (104J) NPO Ceramic 50 for $3.00
.01uF (103K) Ceramic 50 for $3.00

SPECIAL PACK - 25 of each listed ceramic $10.00
200 parts total

Cash, check, paypal now accepted

Paypal to: orders@hamradparts.com

Add $3.00 shipping to any order under $50.00 unless you are ordering the
special Motorola PN2222 transistors.

FS Startek Frequency Counter Model 15-UHS. This is the Ultra High Sensitive
counter that covers 1 MHZ to1500 MHZ. It is as new in the original box with
the manual and battery and battery charger/power supply. These counters are

still sold for
$170. See The Startek International Inc. webpage for more information. I am
asking $75 shipped in lower 48. Thanks, Charlie Hugg, K5MBX

Yup, I hear that often, which is why I've had modest success with Jerry Ziliak tapes. He sends at a character speed of 21 WPM, so each letter almost becomes a single sound. Although that hasn't helped me much, thanks for the thought.

Oh, yeah!!!! I am into packet and APRS, into building antennas for myself & for the RACES stations and into teaching. Here in the West, we have something called the Western Intertie Network System or "Win System" http://www.winsystem.org/ which is loads of fun. It also has IRLP, so I've chatted with guys all over the world with it.

I did HF PSK31 under the club license during FD a few years ago. Great fun.

I've became an ET in 1962 (USN) and liked it well enough to stick around for 21 years. I became an engineer in 1989 (thank you, GI Bill), so I know my way around the 'trons. I've only been a ham since 1992.

Standard CSA-181A   Rapid Charger - desktop charger. Charges in 1 to 2 hrs, w/Automatic switching to safe trickle charge mode. This charger can be used with several batteries. I used it with my Standard C-168A HT Batteries. It has the Type 2 Insert for those type batteries. Other Inserts can be used so that it can charge other Standard battery packs. But this charger includes only the one Insert. Price is $30 plus shipping. Thanks, Charlie Hugg, K5MBX

Looking for Xlnt condition Yaesu FT-990ac with all filters. Not interested in any radio which is not 100% working with super nice cabinet.

Respond with radio condition info, serial #, price and your zip. No ebay referrals.

Thanks.

John

Short helically-wound monopole antennas.

Enter helical height, diameter and frequency  - calculate number of
turns and wire gauge for 1/4-wave resonance.  Plus efficiency and
other characteristics.

Download program HELIX_2 from website below. 45 kilo-bytes.

For a spell checker to work good you need to be reasonable close to the word and he ain't even reasonably close.

sc

Watch all the obese BEER BELLY'ed hams waddle on by
in the parking lot flea market at the Hara Arena.

CLICKINZIE HERE: http://wa5kub.com

The camera was in operation today (Friday) and it's
2000% proof positive what the FDA has said all
along about the rampant obesity epidemic in America.
(makes you wonder how many Big-Macs they sell
this weekend especially in and around Dayton)

There is also an OPEN CHAT ROOM on the site where
you can comment on the goings on. Almost as much fun
as being there live.

Trust me folks, you'll see more middle-aged pathetic looking
white men than anywhere else, possibly except being
the local model train show or the next NASCAR event.

I have owned this radio for many years having bought it new. I had planned on installing it into my isuzu trooper but never actually managed to get around to it. It has had no more than three to four total hours of use, if that. I has mainly been sitting on a shelf waiting to be installed. It has never been installed in a car and the little use it has had was on the bench with a bench top supply. It is in excellent condition with everything except the original box.

Asking $150.00, reasonable offers considered, no trades.

Contact me at pwborders at gmail dot com

You will need a resitance meter and a lot of luck. Open it up and look for obvious signs of burnt components. In the last week I repaired two items that had been plugged into 230 volts that were designed for 120.

One was a Canon printer, it had an exploded capacitor. I checked all the components I could to make sure they were probably ok, such as the fuse (it was ok), the diodes (they seemed to be ok), and the resistors.
After replacing the capacitor it worked fine.

The other was an original Sony Playstation. It just needed a new fuse.

Other items I have tried to fix, were not so simple or I was not so lucky.

I often find that it's cheaper or easier to replace or bypass the power supply and use an external one.

Geoff.

Certainly.

But perhaps you meant to ask whether it would be less
expensive to fix it or to replace it. That is a very different
question.

It might be cost-effective if you could fix it yourself,
but not recommended without previous experience
fixing these kinds of circuits. They are frequently rather
tricky, and almost always dangerous. If you have to
ask the question, it may be a good indication that you
should not consider doing it yourself. OTOH, if you
have to take it to someone who charges commercial

rates, it may very likely be less expensive to just replace
it.

Man did you ever call that one right on the head !!

I also watched the HamventionCam today and I
ain't seen so many big beer gutz floppin over the
belt at the waistline since the day I went to the
St Paddy's Day party at the local Am Legion Hall.

You gotta think how those guys manage to
walk upright without falling over face-first
from the offset center-of-gravity Beer Belly.

Oh well, here's to the future of Ham Radio:

PFHBBLTTTTTT!!!!!!!!!!!!!

True, but I must have counted close to 40 (fourty)
morbidly obese hams seated in those motorized Scooters
that I saw zipping by the HamventionCam today.
Many of them stopped for the camera, got up mugged
4 the camera, then hopped back on and zipped away.
(funniest was the guy pulling a red wagon behind his Scooter
that had a couple of big astron power supplies in it.
Guess he needed one to re-charge the battery ? (grin)

I was there for 4 hours on Saturday.
Nothing but old test equipment and computer junk.
Only reason to go anymore is to meet people, albeit an
expensive one. Never again will I goto Dayton.
It's day has ended, period. E-Bay and private ad's on places like
QRZ.com have killed it. Not worth the effort anymore.

The last time I was at dayton was 1987, and it sounds like it hasn't changed. It was always a place to find parts and equipment. In the early '80s it had a couple years where it was mostly C-band sat TV equipment, parts and kits. In the '70s it was mostly military surplus and half finished assemblies, along with older tube type ham equipment. What you find depends a lot on the economy, If its been good for a while, there is more good used equipment. Also, the newer radios fail a lot faster, so less make it to the used market. Some of the mail order dealers don't have any real inventory, so they have nothing to take to hamfests because they ship fill their orders as fast as their stock comes in.

I have only been to Dayton once and found it interesting. If I was within 200 miles I would probably go there every year but being on the other side of the country once will have to do. The Flea Market is nice but that cannot be the only reason for one to go to Dayton. There are numerous other activities going on all the time and I believe if one goes to Dayton they should make them the main priority instead of the Flea Market. Almost anything can be bought online nowadays so to go to Dayton to haul home a car full of junk just doesn't make since anymore.

So how about a Dayton without a Flea Market ? Are we all so much into the Junk of our Hobby that we forgot the human element?

Just my two cent worth.

all no enough fraid so

indeed I likely would not go to a hamfest without vendor the normal
reason Go is to stock on them and hoe maybe something else will turn up

Well, its a 2000 mile round trip these days so I simply can't go. I did go almost every year from 1970 to 1987, when it was a little over an hour's drive. I bought tools, parts, manuals, databooks, test equipment and things I couldn't find at any of the local distributors or surplus dealers. I made the circuit inside to talk to Motorola and several dealers, but 95% of my time was spent going through the flea market. I could by new parts for 10 to 205 of what they would cost from a local dealer, so I would buy a lot of my inventory for the year, if the price was right. Where else would you buy a pair of new enclosed racks worth more than $1200 for $75 from a company that had just gone out of business, or a nice scope for $5 in those days?

--
Service to my country? Been there, Done that, and I've got my DD214 to prove it.

I used to go many years ago when CP/M computer were just on the edge of
being overtaken by DOS v.1; they had a LOT of good stuff then, but that was
before ebay, etc. too . . .

Oh,  your not dyslexic then?  So that means your what?  Ignorant ?  Not
properly schooled?  Or just a common drunk or dope addict that gets worse as
the night goes on?

Hello All.
I have an ICOM IC706MKII and occasionally the receive & transmit drops
way down. I can still hear strong stations and they might hear me but
very weak on both (TX & RX).
It does not do it all the time. It just went all winter without a
problem but has now cut out (or down) twice in the past week or two.
The rig works fine otherwise.
Any one else have or hear of this problem? Any suggestions as to the
cause?
Thanks for any help.
VE1KRE - Keith.

Can anyone give me some insight as to why my Cushcraft tri-Band 2/6/440 beam
SWR goes up to 3:1 on 6 meters only when it rains? We had an openiong today
here in NY and it rained, but I did not dare transmit with an SWR that high.
Any input sure would be appreciated.

Has anybody had success using split ferrite donuts on the spark plug
wires to suppress ignition noise? Would they be most effective on the
end near the distributor/electornic ignition, spark plugs, or both?

Thanks/'73...Carl - W5SU

Saturday is the worst day to attend Dayton. With all hamfests, the best deals are either sold during dealer setup before the hamfest or during the first few minutes the hamfest opens. Some folks who don't intend to sell buy vendor passes to shop early. If you attend hamfests to buy and you can't be there when the doors open, you might as well stay home.

Well run hamfests do have good deals that rival or beat Ebay hands down. I usually come home from good hamfests with an item or two that made my trip worthwhile. Then there's hamfests held year after year in the same poor rut that makes you wonder why the sponsors even bother...

Once upon a time, one could talk with designers/engineers and find some useful bargains. It was interesting and much anticipated in spite of the pain every year to find a room. The attendees were of all ages.

A couple of years ago, my EE department thought to have a booth with an eye to student recruitment. Head of the department has kin in Dayton and attended when visiting. He concluded that a booth made no sense. Looking at the pictures of this year's attendees makes it clear that he was right.

Dayton's time has come and gone. A shame.

Actually Ebay didn't kill the Dayton Hamfest.  In the 1980's it was
being handled as though it was still the 1950's and full of stuff that
had been carted between too many hamfests.  Dayton is dying because the
promoters made the conscious decision to do nothing.

I remember it when people came from all over the world to the dayton hamfest to see the new product releases. A lot of manufacturers unveiled their latest radios and accessories there, every year. I also met the founders of a lot of small manufacturing companies at the mini trade show that was inside Hara Sports Arena. There was an sheik from Saudi Arabia who flew in every year in a private jet. He was followed around by his staff as he talked to different manufacturers and bought multiples of anything that caught his eye, while the staff paid in cash for the orders and arranged for anything that was in stock to be trucked to the Dayton International Airport.

In case there is ANYBODY out there not realizing this yet:

Here's how it works:

A post will go as follows:

"The ARRL is a Nazi (or insert Liberal or Gay, or whatever) and all Techs (or Extras or...)should be shot. AND I SUPPORT IT!!!"

Now the poster sits back and thoroughly enjoys watching the newsgroup fill with verbal dung, back and forth.

If this is what you want, by all means respond to the poster.

If, on the other hand, you prefer ham newsgroups to be primarily there to discuss amateur radio matters in a reasonable and informative forum, then

DON'T RESPOND!

Eventually, the asswipes will find some other lucrative market for their "fun".

Yes. One big happy CB like family with a few Homo's thrown in to make it
more perverted.

Wrong again, Markie. It's only impossible to a fucking imbecile like
you.

> >You refuse to do so,
> > and we must thereby assume that, 1. You are lazy.
> one is the closest

Mark admits he's lazy, that's why he's unemployed and on welfare, too !

> > 2. You are far too dense
> > to know how to use one. 3. Your head is so firmly emplanted in your rectal
> > cavity that you cannot remove it. 4. All of the above.
>

> you clearly have your head up your ass
```

Hey Markie, try not to spew back the same argument to what was said
about you, dumbass!

Sort of like how you were/are a dissapointment to your parents, Markie
the Moron.

Can anyone advise where I might find a set of knobs for a dual shaft control, such as found on HP power supplies that have a course and a fine adjustment on the same shaft. Typically the outer shaft if 1/4" and the inner one is 1/8".

Ed K7AAT

Does anyone have any idea on some software that I could use with Fedora Core 5 and RadioShack Pro 97 Scanner? I have the USB Programming cable from RadioShack. I like Win97 but I'm in Linux more than Windows.
Please help. Reply to ericmooneyham@charter.net

I still have my red 1957 issue. My father brought it home one day. I was 14 years old and had this really big interest in shortwave radio.

I doubt it. Virtually all remote control programs run on Windows. You could try running Win07 under an emulator like Wine but I suspect you'd have to write your own USB driver.

Kenwood TS-50 HF AllMode   365.00 Shipped & Insured
Works 100 Percent/Receives and puts out full watts on all bands.
Front panel is excellent, was mobile so cabinet has scratches.
Comes with short power cord with fuses on both sides and has the
original Kenwood microphone and comes with manual.

365.00 Shipped and insured .   This Transceiver certainly will not be
dead on arrival.
FIRM on price.

Try a spell check you goofball.  I don't give a damn if you are dyslexic or
not.  That does not preclude you using a spell checker.

Not true HP-style knobs, but they will do the job:

I just bought a 1968 issue and a 1985 issue. Both look to be quite full of theory and circuits. Haven't had time to look at all of the goodies yet, but I'll get there. Already got my eyes on a 2-meter Xcvr and an RF bridge.

Even worse (or worst?). While researching (i was trying to run the Icom
pcr-1500 controlling software under WINE), I found out that wine has no
visibility of the USB ports (they're working on it, yet as of today no USB
ports).

Someone suggested me to try it under VmWare, a little bit oversized as a solution... but worth a try. I haven't tried it yet, though.

Perhaps "efficient" is the wrong word.

In my experience, it is quite difficult to send distinguishable Morse dots and dashes without a key (YMMV). Doing so by keying a mic or touching wires together thus becomes very slow - slower even than tap code. Also, it takes considerable effort to learn Morse and even more practice to copy all the less than perfect fists out there. Thus the number of operators and potential listeners who can copy such a 'bad fist' are few now and are rapidly vanishing

now that Morse is strictly a hobby mode. OTOH, everybody who read my post now
knows tap code - which is common in prisons, mines and other places because
anybody can copy it with little or no practice.

I'm not suggesting that anybody eschew Morse if they enjoy it - just that they
stick tap code into the back of their minds for emergencies.

I don't see how this is any more efficient (indeed, it appears to be
less efficient) than CW-Morse code. My understanding is that Morse
wisely used the least complicated sequences for the most commonly used
letters. I think this is also true of PSK31, but I could be wrong.

Consider the letter "E": a single "dit" in Morse, but it becomes
one "tap" followed by 5 "taps" in the above scheme. None too efficient,
it seems to me.

DX-302 REALISTIC SHORTWAVE RECEIVER..MANUFACTURED IN THE EARLY 1980'S..THE DX-302 SELECTIVITY SWITCH IS A TRUE IF FILTER WITH WIDE AND NARROW..WILL ALSO RUN ON BATTERY POWER..HAS A PRESELECTOR TUNE SWITCH..30 BANDS OF 1MHZ ON THE INNER TUNING DIAL..AND THE OUTER TUNING DIAL TUNES EVERY 1 KHZ...RECEIVES FROM 050 KHZ THROUGH 30 MHZ..HAS ATTEN SWITCH TO CUT DOWN STRONG SIGNALS..AND BFO PITCH FOR LSB/USB/CW...RF GAIN AND AF GAIN/POWER SWITCH..HEADPHONE JACK AND COAX AND SCREW TYPE ANTENNA CONNECTOR..THIS RECEIVER IS IN MINT LIKE NEW CONDITION.NO SCRATCHES OR OTHER PROBLEMS WITH IT. .READOUT IS BRIGHT RED AND ALL LIGHTS ARE IN WORKING ORDER AND DIALS TURN FREELY.

This is a communications receiver that covers 10kc - 30 mc in 1 mc bands.   This radio is in MINT condition.   Original knobs, crisp lettering, cabinet and front panel are excellent.   Rear battery box is complete with battery tubes.   Large red LED readout, wide and narrow selectivity, AM/SSB/CW capable and much more make this a fun receiver.
  Original cabinet paint is PERFECT.

I'm confused by the Homeowner's association statement that Federal law
overrides their restrictions.  PRB-1 doesn't obviate covenant or private
land use regulations.  If the homeowner agreed to deed restrictions on
antennas when he moved in then he should be complying with them.

Many years ago in a land far, far, away.........

I had a tower up with multiple antennas on it... for the first week it was up, I left the feedlines coiled up at the bottom of the tower. I lived on a Navy base at the time and had to jump through all the hoops to put the tower up in the first place. I got a dozen complaints that first week....all were for TVI. Turned out that there was a CB'er a block over running an illegal amplifier.

I haven't been able to find the covenants for the LakeRidge subdivision
in Lubbock online, but unless the restrictions really prohibit antennas
(and I doubt they do, the developer's comments notwithstanding) then the
ham was well within his rights to install whatever size antenna he

likes.

OTOH if the restrictions really do prohibit antennas then the ham would
have to have agreed to them at closing, and the antenna would be illegal
vis-a-vis his contract for sale. I don't think this is the case since
any casual reader of the FCC ruling (PRB-1) would know that.

And ham radio, it was to send and receive phone and CW. Now we're
required to believe it acceptable to send and receive Blowjobs.

That's not my reading.  Violating the law of hospitality. Where in the
Torah is that law specifically cited?

Homosexual sex is defines as SODOMY in Western Law.

Lots of operator skill there,  eh Cecil?

Let them thar machines do it.  Gives us more time to watch TV and improve
our watching techniques.

Yeah buddy.

Now that does not surprise me one bit.

Have a good life loser.

Dan/W4NTI

They may sing a different tune when it is their hind-end that needs help in an emergency. Although I think if I were him I would put up a smaller beam just to be a little more considerate of the type of neighborhood he is in.

I knew the neighbors didn't really like my tower and antennas, and I recently took the tri-band beam down because I was going to concentrate on 40 & 80 during the sunspot low. I may put it up again one day, but for now I think they appreciate having just the 2-meter beam on the tower. Of course I don't live in an area like that ham. If I did, I probably wouldn't put up a tower in the first place. Different strokes for different folks.

*********** REPLY SEPARATOR ***********

Some people enjoy making horse shoes the old way on an anvil. Should
that be a required skill for getting a driver's license?

Bill, W6WRT

I hope you mean TALMUD!

Does the TALMUD have the same broad based acceptance in Judaism as the
TORAH?

<winchester1886@hotmail.com> spammed:

http://cgi.ebay<snip>

STOP THIS SPAMMER!

Google Groupers:

Go to the original post with this subject, click on "Show Options," click on "Show Original," cut and paste the whole message including headers, and send in a spam complaint to:

groups-abuse"AT"google.com
abuse"AT"epix.net
spam"AT"ebay.com (Spammer's eBay account is "66fourdoor")

This spammer shows up under various trash (MAPI) email accounts:

trippin28track"AT"yahoo.com
winchester1886"AT"hotmail.com
nativebrookie"AT"hotmail.com

Due to Google Groups shutting down some of his other MAPI accounts, the fool is now also spamming from his own POP3 accounts:

analog"AT"epix.net
bb69"AT"epix.net

His home ISP is Epix. His main POP3 account is thenudofamily"AT"epix.net. ALL his spam eminates from Epix IP blocks.

Those using real newsreaders will already know what to do with this spamming pest and eBay fraudster. His spam posts are a violation of eBay's Terms of Service pertaining to Usenet Policy. Be sure to include that in your report to eBay.

Using a spell check program takes but a few seconds. You refuse to do so,
and we must thereby assume that, 1. You are lazy. 2. You are far too dense
to know how to use one. 3. Your head is so firmly emplanted in your rectal

cavity that you cannot remove it. 4. All of the above.

By golly your'e right!

But it sure would take a long time to spell it out to the other op if
you did!

Crossbreed them with radical militant evangelicals coupled with
uncontrolled conservatism and you get neo-cons.

STOP THIS SPAMMER!

Google Groupers:

Click on "Show Options," click on "Show Original," cut and paste the whole message including headers, and send in a spam complaint to:

groups-abuse"AT"google.com
abuse"AT"epix.net
spam"AT"ebay.com (Spammer's eBay account is "66fourdoor")

This spammer shows up under various trash (MAPI) email accounts:

trippin28track"AT"yahoo.com
winchester1886"AT"hotmail.com
nativebrookie"AT"hotmail.com

Due to Google Groups shutting down some of his other MAPI accounts, the fool is now also spamming from his own POP3 accounts:

analog"AT"epix.net
bb69"AT"epix.net

His home ISP is Epix. His main POP3 account is thenudofamily"AT"epix.net. ALL his spam eminates from Epix IP blocks.

Those using real newsreaders will already know what to do with this spamming pest and eBay fraudster. His spam posts are a violation of eBay's Terms of Service pertaining to Usenet Policy. Be sure to include that in your report to eBay.

"radical militant evengelicals"? You mean like the
Salvation Army? Yeah. Good for Target to get rid of
those wackos with their dangerous metal tripods and
fake plastic kettles full of nickles and dimes.

Sim-

I assume you have contacted Uniden.

Just how "sunbleached" is the meter face? If there is enough of the
original marking left, you may be able to remove it from the meter,
photograph it, and use a computer graphics program to do a restoration.

>What is one behavior on our ham bands that might or could make you loose
>interest in ham radio and leave if you heard it or if it became previlent?

None. I have fairly thick skin, and I'm rarely bothered by anything that happens on the air. I do have a VFO ya know... IE: tuning knob for all you without an EE... But like I say, I'm pretty bored lately, I don't get on the air near as much as I used to. The boredom has nothing to do with the people on the air. It's from farting with the same basic stuff since I was in jr hi school... I don't get much thrill anymore.. Only about 3 clicks above talking on a telephone. Which I hate btw... Ham radio at the house is too easy. No challenge anymore.. I turn it on, and yak.

Wow...
If it wasn't for mobile/portable operating I would be about radio dead.
At least there is still some challenge in that area... IE: trying to
put out
a decent signal with shrimpy antennas, low power, etc..
Yea, I've tried all the digi crap too, before I get 90 people telling
me to
get with the modern techniques....PSK31, SSTV, etc, etc, ad nausium..
I'll do it for two weeks, and then the boredom sets in... I kinda got
into
SSTV, but PSK31 bores me to tears... Did I say I generally hate to
type...

>And does it seem like it's going that direction?

I see no difference from what it's been the last 20 years or so, except
there
are far fewer CW ops on the air lately. I tuned 40m CW the other night,
and
didn't hear a single QSO... And I'm talking the lower CW section, not
the
novice band.. But do I whine? Nope...Times is a changing, and there is
not much I can do about it. The argument that CW weeds all non hackers
is total BS... All it weeds out are the CW lazy, not the troublemakers.
A dedicated troublemaker will pass any tests needed if that's what it
takes to stir it. You should have heard 75m in the early -mid 80's...
All had to pass code tests in that period. 75m is actually cleaner
now,
than it was then. Mainly due to Hollingsworth cracking his whip a few
years ago.

Even more amazing is that no matter who starts the thread about CW, the
same group of people will post the same tired old reasons about why CW
is still a useful screening tool for prospective hams and how CW is
still an important way to communicate. And they do not want to hear
about the world as it really is in the 21st century.

If I had the time at the house, I would have invested more time and $$$ in the shack that what I did in my service truck.

> Wow...
> If it wasn't for mobile/portable operating I would be about radio dead.

For the most part, I am only able to get on the air mobile from mid march until after the first frost. I am a heating and a/c contractor in south Mississippi....8am - 9pm work days, 5+ days a week doesn't leave much time for anything else.

> At least there is still some challenge in that area... IE: trying to
> put out
> a decent signal with shrimpy antennas, low power, etc..

Not too much of a problem with enough money.... When I am on the road between calls, if I want to talk, I am going to talk, even though most of the time I am listening. Like I said earlier... I have more invested in the mobile station in my service truck than I have in the shack.

> Yea, I've tried all the digi crap too, before I get 90 people telling

> type...

I spend too much time on the 'puter already, and FWIW, I was on packet in '84 with a C-64, and a homebrew modem, and customized my own software for it.

> years ago.
> MK

I have been active recently with teaching a class for folks to get their
licenses and part of it is CW. Being here in south Mississippi and only
about 60 miles from the gulf coast, we are very aware of the communications
limitations and what works an what doesn't when the lights go out. CW is
only another weapon in our arsonal of communications tools......keep in mind
that not much works when there is *NO* infrastrucure left intact.

-n6ojn

Only 21 more shopping days till hurricane season.

 Icom never had a thing to do with the HTX-202. No license, design
etc. Radio Shack choose accessories that were popular and happened to
choose the Icom battery design. You are correct Maxon made the HTX-202
for Radio Shack.

I had many calls while working at Icom over that rumor Many wanted
Icom to repair the HTX-202. Icom America asked IJ if they were making
the HTX-202 and they said no but found out Maxon was building the
HTX-202. all water over the dam now.

It was true that Icom did private label the H and U-16 for Midland
Land Mobile for a while.

Troll, or no troll.....it is not unreasonable to expect those of all ages to
read this newsgroup. Accordingly, my expectation of this group is to limit
the language in your posts to the type of language you would use on the air.

I just passed my tech exam and am looking
forward to the CW test. It certainly exercises
a part of my brain that seems to need that
kind of excercise. I'm glad it's still a requirement.
It all seems to balance out.

Good luck to you my friend. It will be a pleasure to work you on HF.

Congrats on getting your Tech too.

Tnx for the reminder, I almost forgot.

As ham radio test standards have lowered over the years, I've noted a marked increase in the amount of obscenity, profanity, and indecency.

At the same time the price of gasoline has gone up, the minimum wage has gone up, the stock market has gone up but in just about all areas of society mutual respect and courtesy have gone down.

I think it has very little if anything at all to do with Morse code.

When I was born (1-10-33) there were approximately 130,000,000 Americans. I
think we are approaching 300,000,000 now. I'm still relatively polite, I
think that may be why I get so many funny looks when I speak
to folks. Poor as we were, I think I liked the 30s and early 40s a whole lot
better. Main thing I've noticed about the more recent citizens Is that there
have never been so many with such high self esteem and so little reason
for it. (G) I'm a relatively recently licensed Ham (Tech-2002, Gen'l-2005)
Had no real interest in CW but realized I had to pass the test to advance
beyond the no-code Tech level (Besides, I figgered actually having passed
even the elementary 5 WPM CW test would eventually be a prideful thing.)

I'm a couple decades younger than you (my mother was born in '33), but I have sure seen a massive change in societal attitudes since I was young. Used to be that people understood the concept of earning what they get out of life, now everyone seems to think they're entitled to anything they want for free. Kind of sad, really.

Yessum, I agree. I always hated to work, but I always understood that it was
something I had to do.
I was a high school dropout, but after I got out of the Army I picked up two
college degrees. I never really amounted to much, but did pretty well for a
dropout, even taught Industrial Arts in a Dallas Junior High
School for eleven years. Finished my working years as a Design Drafter (CAD)
for Halliburton.

What is sad is that in California they deny the Boy Scouts public park
access, but it is OK for gays to have public sex in the same parks without
fear of being arrested.

used to be that sorta worked today hard work does not equal reward
rarely do the books balance, I have never been paid what I was worth
(soeties thnakfully I have been way more than I was worth I tried to
discourage people from trowing me work i did not like by charging more
for it, they paid it)
>.....now everyone seems to think they're entitled to anything they want
> for free. Kind of sad, really.

nobody is asking for free access to HF, I am not I am asking that
requireents for such acces be reasonable, with the decliene in the use
and import of CW over the years the CW test is not a reasonable
requirement, the same cane be said of othe rpeices of the written test

(like anybody realy needs to know whatfrequency is balck in a fastscan
signal (a UHF mode) in order to use HF spectrum is truly beyond me but
it does not rsie to the pass fail nature of the CW test

Thanks.

I'm trying out the shareware program "nucode"
right now. Is this a recommeded way to learn CW?

My long term plan is also to pass the General exam,
then build my own HF CW receiver, and then later
try transmitting low power to see how far I can
go on an empty tank.

Grow up?  OK, even I am amused by that one.

Nevertheless, it is reasonable to expect that a technical forum representing
an amateur radio subject, have higher standards than cable TV language.

For isolated characters, a good ear could probably differentiate them
with 22 millisecond and 20 millisecond bit times (45.5? and 50 Baud).
I had a friend who said his uncle could do that.

But if the characters ran together, especially with a 1 or 2 bit stop
time, your brain would have no way to seperate them. Neither can some
simple hardware decoders.

"Silent Key" <cw.h@m.bands>
> When CW is lost, new hams will be just like CB'ers and SWL's, or some
> other lower life form of radio hobbiest. You name it.
>

Let's use proper nomenclature. There is little danger of CW going away. What is going away is Morse Code - replaced by more efficient ways of comunication. We're always asked "What would you do is the only way you could communicate was to turn your transmitter on and off?". Simple! I'd use Tap Code - you know the "CW" with only dots, no dashes - the one used by banging on pipes, the one anybody can use without tons of practice. Arrange the alphabet in a 5 x 5 matrix leaving out K (use 'c' instead). Each letter is addressed by its position in the matrix: a = 1,1; b = 1,2 .... f = 2,1 and so on. These become your "dits" or bangs or flashes or blinks as appropriate. I'm amazed at how few know this.

obviously i can type you might have tried saying typ better but you are
so imprcise while demaning it ofothers

Id tell you to go to hell but i can se you are already there
> Otherwise you are almost too pathetic to mock.

no is making you mock me

indeed it makes you look petty but then it seesm you are petty so I
supose you need to kepp on to maintian apearences

why? or better what makes it higher?

to do so implies that it is accepted that there is soething worng
inherantly with saying or typing "shit" when "shit' is what you mean.

given that words like "shit" "fuck" have an impact beyond their
equivelanets feces, and fornication, why ot use them

the only that does is foisting a morality thatI don't accept

agree the word I mentioned and other are over used but that is a only a
problem in that it lessens their impact not that it is worng

To: An Old Friend

Your choice of language clearly identifies your value system.

The subject you passionately defend is considered immoral by 90+ % of the people in the world, and ALL the world's established religions.

A multicultural society will condone your language and lifestyle; and, YES, you must condone their 'straight' lifestyles. Any right you claim for yourself you must also respect in others with whom you disagree.

Finally, this thread is so far off subject that it deserves a quick referral to the circular file.

All you guys posting to this thread do not know anything about Usenet.

All this crap is being cross posted to newsgroups where there should
be no interest in this bickering, childish behavior.

Before you do any follow ups to this message, right before you hit
your send button, look at what newsgroups you are posting to. Delete
(do you know how to use your delete key?) all the newsgroups except
rec.radio.amateur.misc. then the antenna newsgroup and the equipment
newsgroup etc. will not be seeing the posts which are IRRELEVANT.
So if you like this bullshit bickering stuff go on over to
rec.radio.amateur.misc and you will see there are lots and lots of
them to entertain you all night long. You can call all of the posters
there names to your hearts content.

If you are considering posting a floowup to this message do this:

Up on the top of your message delete all of the newsgroup names EXCEPT
rec.raio.amateur.policy because the antenna guys and the equipment
guys do not really care about this subject.

Thank you very much. The whole world will think you are much more
intelligent now that you know how to use Usenet.

The school yard is often lively with youngsters demonstrating their
capability of spewing out newly learned potty words that they
envision makes them more of a man.
However when they do mature they usually realize that kind of language
really only makes them appear child like. Some never do get it.

Regards
Gary

every word or phrase has its place and its use as does everymode of
beahvoir including say genecide the problem with all them is not that
they are imoral but siply over used

thus teacxhes the Talmund at any rate

PTOH childish is not imoral which was the posters point

>Memorizing a sound is no more of a skill than memorizing an answer....

But being able to pull up the correct characters from memory at the pace of an incoming stream is a skill.

I have an 85-year-old uncle who was a cw operator in the Pacific in WWII. He hasn't done anything with cw since 1946, and he can still copy around 10 wpm when I make him a bet.

I can go for several years without hearing cw and still step in and copy 15wpm easily.

Those of you who once passed 20 wpm tests and now find it a challenge to see if you "remember any of the characters" are simply not very bright.

For either line-of-sight or multi-hop propagation through the
ionosphere -

- this apparently simple program computes path loss in dB between
transmitter and receiver, field strength at the receiving site, and
receiver S-meter readings.  Transmitter power output can be varied
between 10 KW and 1 milliwatt.

It is educational for newcomers and of assistance to DX and
line-of-sight experimenters. It illustates how S-meters OUGHT to work.

Download program PROPGATE from website below in a few seconds and run
immediately. Its at the bottom of the list.

Well then use PACTOR II with those symbols. PACTOR II will
get through when CW fails.

Any rational evaluation of the modes available will show that there is a
combination of circumstances that make a specific mode the one that will
"get through". One can "prove" that their favorite mode is the one that
will get through under certain conditions.

I'm looking for an SSB Electronics  LT6S transverter in good shape.
Also looking for the SSB Electronics LT2SMK2 or the Kuhne TR144H.
Anyone have any leads? Please email.

Thanks

Joe N6KK

You are claiming that there are circumstances under which CW can be understood but none of the newer digital modes can?   Assuming, of course, a skilled operator for CW and appropriate equipment for digital modes. Or even software for both.

Jack Hamilton
jfh@acm.org

Though in a state of society some must have greater
luxuries and comforts than others, yet all should have
the necessities of life; and if the poor cannot exist,
in vain may the rich look for happiness or prosperity.
The legistlature is never so well employed as when they
look to the interests of those who are at a distance
from them in the ranks of society. It is their duty
to do so; religion calls for it; humanity calls for it;
and if there are hearts who are not awake to either of
those feelings, their own interests would dictate it.

Sir Lloyd Kenyon, Rex vs. Rusby, 1800

I have seen PACTOR II get through from Europe with 10 watts
when there was no humanly detectable signal. All I did was
choose the correct frequency and time based on a schedule.
I detected absolutely no carrier on the S-meter or with
my ears in CW mode. The PACTOR II signal was literally
down in the noise but my SCS PTC-IIe somehow managed
to dig it out.

It may be similar to the built-in speech processor that they used in their
DSB-100 transmitter back in the early 1960s.  If so, that unit, as you
describe it, was quite effective for its day.

It is nonsense in rec.radio.shortwave. Please drop this news group from
the thread.

Another thread about CW is pointless. You guys have posted the same
comments hundreds of times on this subject.

Dee, please go back and re-read Silent Key's original post and my response.
I was reacting ONLY to that one person's remarks. I was actually
narrow-brushing.

While I'm an officer in just one club, I am in three and none of them have
any crummy people -- and I certainly agree with you that many amateurs don't
jab the techs. In fact, I encounter practically total acceptance. That's
why Silent Key stood out.

With regard to can/can't learn, I have the most problems with the characters
that are four or more elements long. dit-dah-dah-dit and dah-dit-dit-dah
are different, but I can't tell you what they are. I think one of them is
"P" because I remember the symmetry.

Transcribing is not the problem. If I hear dit-dah, I can write A. But if
I hear dit-dah-dah-dah-dah or dah-dit-dit-dit-dit, I don't know what to
write, because I don't know what those are. I cannot store the memory of
what those sounds mean. Since you (apparently) don't have the problem, you
won't relate.

And it isn't a lack of time or effort. I have been at this since 1993.
Many methods. No appreciable successes. (I did get "D" from "dog-did-it"
and "Q" from "pay-day-to-day" -- a couple of real triumphs, eh? [sarcasm
intended])

This is no picnic. Thanks for understanding.

Amen!

I used to be a staunch defender of CW. We lost the 20, we lost the 13, we
are going to lose the 5.

In today's age of materialism, self created rights and the liberal ideals of
fairness, I'm just waiting for the removal of all testing requirments.

Just show up, mark A, B, C or D on 10 questions (no grading, just turn it
in) and then get a certificate of attendance, a blue ribbon that says 1st
place and a 1x2 vanity call sign.

Guy

That is correct. Let's just take a very simple example. PSK is one of our newest digital modes. When there are auroral disturbances, PSK cannot be used. The phase shifts induced by the auroral activity make it impossible for the computer to read. These phase shifts effect all the modes. Modes that depend on phase shifts (such as PSK) are affected the most severely and quickly become unusable. On the other hand, CW takes on a buzzy, raspy sound but a human operator can still decipher it although a computer will fail. I have personally experienced these conditions. If the auroral induced phase shifts aren't too severe even SSB will get through when PSK has failed. I have also personally experienced this.

Let's take another. This time packet. Packet has nearly died out on HF because it is not robust enough. Conditions have to be almost perfect for there to be a usable packet signal. Even low levels of atmospheric static make it unusable. Slight fading also causes problems. Yet voice, CW, PSK, and RTTY will all cope with conditions that can make unusable.

Each mode has its strengths and weaknesses. For each mode, there are conditions for which it will be the best choice and conditions for which it will be the worst choice. If a person wants to maximize their communication capabilities, they need to become conversant with each mode, its characteristics, and what affects its propagation. For CW, this should include learning to copy by ear. Under some conditions, the human brain is the only computer powerful enough to decipher it.

If you were in this area, I would be more than happy to take a try at teaching you. The "dog-did-it" approach is one of the worst possible ones to use. It is like trying to count the dots and dashes. On longer letters it can be a problem.

For someone like yourself, it is absolutely essential that you eliminate any and all extra translation steps. The burst of sound should register directly as a letter. In other words, hear it as a letter and reflexively write a letter. Then it doesn't matter if you happen to know the actual number of dots and dashes. No counting, no "dog did it", no "helpful" memory devices at all. They will only hinder someone like yourself.

> This is no picnic. Thanks for understanding.
>

Well I just wish that I could take a stab at teaching you. There is always a sense of accomplishment in expanding your abilities in ham radio. For example, in the past couple of years, I've been exploring the digital modes and VHF/UHF propagation. It's a hoot to work Texas on 2m from here in Michigan.

*********** REPLY SEPARATOR ***********

Complete nonsense. CW testing is being phased out because CW is becoming obsolete, period. Don't try to read anything more into it than that.

With all the great new digital modes available - most of which are far superior to CW - forcing people to waste valuable hours learning an obsolete mode is sheer folly. There are so many great things to do with Amateur Radio. Do them!

73, Bill W6WRT

Quite correct Bill. Commercial and military have dropped Morse code
for the very reasons you stated.

In this day and age, requiring proficiency in Morse code for a radio
license would be as requiring proficiency in horse husbandry in order
to get a driver's license.

Danny, K6MHE

In my many years I have come to a conclusion that one
useless man is a shame, two is a law firm, and three
or more is a congress. - John Adams

OK folks. All I hear is whining about how things are changing. So
I'll ask the question again.

If you really believe that morse code is an important way to communicate that should be preserved then you need to convince other hams and potential hams to learn the code. You need to convince enough

hams to use code so its very usage generates excitement and makes people want to join in the fun. Almost self-perpetuating like it was in the 1950's.

Preaching (or complaining) to the choir on the radio fora about the abysmal state of things will not add one person to the ranks of key pounding hams.

So what are you going to do to increase the number of code practicing hams.

Hi All,

I'm looking to replace a sun bleached front panel meter on a old President AR144 AM/SSB Cb radio. Anyone know where I might obtain this meter?

Sim

Don't you find it odd that people need to be "convinced" to use morse?
Nobody needs to be "convinced" to use PSK31, RTTY, SSB, FM or even AM.

Life is too short to waste it "convincing" people to use a mode they
are instinctively not interested in.

The underlying problem is you want things to be like they were back in
the '50s. Well, I was licensed in 1957 and I had fun back then too,
but time marches on. Try marching along with it.

Bill, W6WRT

Actually if you go back and re-read the entire message I think that between the lines you might pick up that I think these guys are living in the past. CW is all but dead and buried. All professional users of consequence have abandoned it.

I have the same problem with the code. My brain wants to identify or count the dit/dahs and then translate them into the character. Learning each character as a quick burst of sound, as if it were sent at an equivalent speed of perhaps 20-wpm, is probably the best method.
I never got beyond about 10-wpm after practicing on and off for many years, sometimes for months at a time. I used to listen to the code practice transmissions on W1AW every night. If the 'General' code requirement had been 3-wpm less, I might have been a ham' decades ago but I wanted HF phone privileges or nothing (stubborn me). I didn't have any interest in getting a Technician license or being a Novice until it expired because of my code limitations. I don't think learning the code has much to do with intelligence or even motivation to a certain extent. Some folks are just not wired for code. I could have passed the Extra exam' in the days before the questions were available to be memorized but that 20-wpm was the problem. I tell myself it was amateur radio's loss. :-)

In the olden days, the purpose was well understood. It was, and still is, to become proficient in one or more aspects of radio communication, to provide a skilled base of technically proficient people who pursue an interest in some aspect of radio communication technology and art for personal gain without any financial interest, reward or compensation from the activity.

It is NOT to open a box, plug it in, connect a wire, and, when it doesn't work, get on the internet and ask for help.

I advocate for a code test for the following reason. I value what I have to plan for, work for, sacrifice for, and invest my time for.

I value the reward for 18 months of practicing Morse Code every night for one hour a night. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my Technician License. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my General License. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my Advanced License. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my Extra License. That's an investment.

It took me 45 years to progress from Novice to Extra. [Note: I was 25 wpm CW proficient in the 1960s. Marriage, Family, Profession took priority over Ham Radio.]

I teach Ham Radio classes. I'm a registered ARRL instructor. I'm not invited to teach too often in these days. I DO NOT teach Q&A. I WILL NOT teach Q&A. I teach understanding of what's behind the Q&A.

My Technician classes begin with ELEMENT 1. It takes 3 to 4 weeks at two hours a week for classes to pass Element 1. It takes 10 to 12 additional weeks of a two hour class one night a week plus homework to pass the Technician exam.

Those who choose this path have made an investment of their time and effort. I hope they value that investment.

I WILL NOT support a 4 hour session on a Saturday morning and hooray! You are now a ham!!!

BTW, FWIW, I'm still learning from the skills and experiences of Roy, Cecil, Rick, et al on the antenna n.g.

/S/ Dave, W1MCE

Probably easier to get for some people, and could actually lead to a
good paying career in electronics.

I was wondering if anyone knows anything about a Shure Brothers Inc.
microphone model # DY30
It is a very nice looking mike but I have found no information on it
anywhere on the internet.
If you do know anything about it such as vintage, value, etc. it would be a
great help.
Thank you in advance.

You could have shortened that up considerably. Short version: "I did it so everyone else should have to". See how easy that was? Not an original idea though.

I have a 22-year old Icom 02-AT that has worked reliably until now, when it ceased putting out any transmitter power whatsoever.

Shall I assume the obvious, that the final (amplifier) transistor has blown? (They're easy enough to replace in most radios.) Or is there something else that's known to fail in these (particular) radios that results in a loss of transmitter power?

And can anyone please tell me the part number of the power device used in the final amplifier? Thanx.

OK. I wqas thinking of weak but undistorted signals - there seems to be evidence that digital modes can get through when CW can't even be heard. Audible but distorted signals, as you mention, are a different problem, one that I wasn't thinking of. Sort of like those distorted letters you have to decypher to gain access to restricted Yahoo groups, GoDaddy domain information, and various other web sites - a machine can certainly see them, but OCR isn't good enough to read them (neither am I, sometimes).

Jack Hamilton
jfh@acm.org

Though in a state of society some must have greater
luxuries and comforts than others, yet all should have
the necessities of life; and if the poor cannot exist,
in vain may the rich look for happiness or prosperity.
The legistlature is never so well employed as when they
look to the interests of those who are at a distance
from them in the ranks of society. It is their duty
to do so; religion calls for it; humanity calls for it;
and if there are hearts who are not awake to either of
those feelings, their own interests would dictate it.

The only problem with the EEs that I run across, is they know just enough to
get themselves hurt and/or burn their homes down when they try to work with
ELECTRICITY instead of electronics. It seems that at 240vac, all their
common sense goes out the window.

That is exactly the point I was trying to make. If one is content to turn off the radio and not communicate at times when signals are distorted, then various modes become less important. But I prefer to be able to communicate as long as possible. Thus I consider it part of my goals as a ham to be as conversant with as many modes as I can. I have setup and operated the digital modes, including building my own sound card interface (even though I don't normally attempt soldering), just to gain experience in them even though I have no real interest in operating them per se. Pounding away at a keyboard is too much like the internet or my job.

To clarify, specify the conditions, and the "best mode" becomes evident. With distorted signals, CW wins with voice coming in second. With weak signals, some digital modes win with CW coming in second. For power consumption for a given signal strength, the digital modes come in last since you must have power to run the computer. And the power to run a computer alone (depending on the computer) is often more than enough to run a 100w CW or voice signal. So you add the digital signal and the digital modes become "power hogs."

Every mode has value.

Does it still receive correctly?

What usually happens, is the synthesizer quits, and it stops sending,
or receiving.

The output transistor is a T05 (TO39) type package, and is soldered to the metal frame that surrounds the radio. It is very special, in that the case of the transistor is connected to the emitter. Most transistors in that package have the case connected to the collector. This is done so that they could run the emitter grounded (as is usual) and not need any insulated heatsinking hardware.

The usual way of blowing the output transistor in an 02AT is to use a battery pack that supplies more than 9v, or to try and power the rig directly from your car battery. ISTR that a short on the antenna is a third way.

-Chuck

Dave, W1MCE, BSEE [ElectriCAL Engineer]

Never worked as an electriCAL Engineer. Designed transistors for almost four years. Designed USAF Flight Line Test Equipment for six plus years. Designed USAF Computer Controlled Avionics Test Equipment for 10+ years. Spent 3 1/2 years as Field Engineer at Hill AFB, UTAH on Computer Equipment. Worked for 7 plus years on the Effects of Nuclear Weapons on USAF strategic assets. Spent part of three years at the Nuclear UGT facility in Nevada. Spent 6 plus years as Chief Engineer on the USAF MX Missile RS/RV. Finished up as System Engineer on the RF Subsystem Force Modernization for the MK21 RV. In between, I managed the Strategic Product Design, Electronic Department for three years, now retired.

I still have my text books on HV transformer design, Generator Design, Fluid Dynamics, Thermo Dynamics, three phase power distribution, etc. around here somewhere ... I hope.

My VP Engineering, to paraphrase his judgment, claimed: "Give me an Engineer with a good Physics background and a good Math background and I can put him/her to work anywhere. In three months [s]he will be blunder proof, in six months competent, in 12 months expert." After 30 plus years of engineering I conclude he was correct.

But, I've left BSEE behind me. I retired from my profession six years ago.

And, as my wife says; "You can take the engineer out of engineering;

but, you can't take engineering out of the engineer." I'm still learning
from highly gifted people like Roy, Cecil, Reg, etc.

I'm still practicing my Vocation ....

CW, you are incorrect. I VALUE my license because it took effort over many years. The issue is valuing your license because you invested time, talent and energy into obtaining it. The more you invest, the more you value.

If you read the full message you would conclude that the message is about investing and reward of investing. It is not about a 4 hour cram short term memory program that yields a Technician License without the KNOWLEDGE of how to build a 1/2 wavelength dipole with coax to connect to the new out of the box toy.

When I read posts regarding 'how to ...' on some basic aspect of Ham Radio I wonder about the training, education, understanding, that went into 'studying' for that license. IMO, the license should indicate a level of proficiency that, in many cases, is missing. When I hear an EXTRA CLASS ham on twenty meters asking someone what the difference is between USB and LSB, we have a problem in training and education.

I don't know if Ham Radio will degenerate into glorified CBers. But, for many it has become a hobby of appliance operators.

snipped

If you really believe that morse code is an important way to
communicate that should be preserved then you need to convince other
hams and potential hams to learn the code. You need to convince enough

hams to use code so its very usage generates excitement and makes

people want to join in the fun. Almost self-perpetuating like it was
in the 1950's.

Preaching (or complaining) to the choir on the radio fora about the
abysmal state of things will not add one person to the ranks of key
pounding hams.

So what are you going to do to increase the number of code practicing
hams.

indeed I am not esp interested in building rig myself more intersted in
interfacing radio with their part attennas and such

indeed I have even been intered in the possibilities of what I call
human assist machine decode of CW I have made contacts where the
machince decodes what it can and I look at a screen to decide is that a
dit, dah or satic, feeding the results back in the machine for clear
text, done that hispeed metro stuff and that has acheived my 3 EME
contacts

all without any real abilty to decode by ear the cw itself beyond
needing to tune the signal

CW is and might be around forever for identifiers in different things.
It can be transmitted along with voice and doesn't get in the way
of other things. Any loss would be the best fun I had during
my Amateur Radio Service and learning Radiotelegraph Second class
training. I even found a code chart at the RF desks at a NASA MSFN tracking
station when I worked there. Just in case!

Fascinating! We have here a perfect example of a functional illiterate
who was able to obtain a Ham license. Of course he would not like CW as
one must be able to spell, and construct simple sentences, which is
obviously beyond him.

Greetings:

I have up on Ebay, 2 Astatic crystal base microphones. One is the
famous
Golden Eagle (TUG9-D104), and the other is the plain TUG8-D104 which
has the grey base and chrome stem and head. These were originally
purchased
in 1976! Please see:

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZve3tjd

Thanks, Tedd
VE3TJD

Whoever you are,
I believe you will find this in the book about the early days of amateur radio. It is called something like "200 Meters and Down", or is it "Below". ARRL has it and many ham stores do. I have a copy and have difficulty remembering the exact title. A really nice read. I also have a 1932 ARRL handbook and I think there are references to the "doom of the advent of CW" in there also.

. You, of course, know about spark. The sparkies didn't like CW and, at that time, the FCC __DID__ out law it (spark, that is).
I admit that it was a loaded question because CW stands for Continuous Wave and what differentiates it from" Spark". Probably not what the troll wanted and I know he/she/it wouldn't respond, but did it anyway.

> > Your fingers and eyes (or ears) aren't broke....

A given and my point exactly.

> >.. so why aren't you out mentoring new hams? ... Why am *I* wasting my time with this...pfffvt

> maybe becuase you are tired of this divisve pissing contest or something like that

Yea. A vent is in order every once-in-a-while, I guess. I figured the CW doom thing would get a comment, so thanks - whomever you may be..

The FCC Outlawed 'Spark' for very valid technical reasons
at that time and they are still valid today.   The very same
logic could be used to still justify the continued use of CW
as an Amateur Operating Mode; even though the requirement
for proficiency in CW is not used for an Amateur License.

My arguement for CW has never been from the perspective of getting more ops. It's the quality of the operators I'm concerned about, not quantity. A code requirement may mean someone will study the theory portion a little more while they're building up their code.

One day, when you turn on your HF or VHF/UHF rig and it sounds like CB, you'll understand where I'm coming from.

I'm going to drop this agrument because it looks like I lost and people
really don't care anymore one way or the other, but I'll end it with just
couple questions to all;

What is one behavior on our ham bands that might or could make you loose
interest in ham radio and leave if you heard it or if it became previlent?

And does it seem like it's going that direction?

I don't remember who was all in it, but one guy kept dropping the soldering iron on the ground in front of people, then he'd bend over slowly to pick it up again like he was hoping someone might give him a poke. Disgusting.

Roy, don't antennas radiate CW better than they radiate SSB?  8^))

Anyway, rraa has it's fair share of jerks.

So, are you asking if people are getting rude, using foul language and don't seem to give a crap about each other? If so, yes, they are. The sure cure for that would be to increase the code requirement to 30 words per minute for general. Faster for extra. Along with that, NO license of any kind without an engineering degree. This all wouldn't do anything about lousy operators. What it would do is reduce the number of new hams. After a while, we would be down to 100 or so nationwide. The bands would get much better because there would be virtually no one using them. Something that you seem to have failed to consider is that society in general is adopting these traits you find objectionable. New hams tend to be more objectionable (under this criteria) than old. Is it because they didn't spend hours studying code? No, it's because they are products of the society they live in. Americans are known worldwide as pushy, arrogant, self centered bastards. There is a reason for that, they are.

My point was that few people here think beyond the dipole, quarter wave
vertical, or shortened mobile vertical.  And all of those for HF.  The
group is broad minded in many ways, but very narrow in others.

No license without an engineering degree would be fine by me.  And
follow it by one that requires complete knowledge of the National
Traffic System.  Which would be more inportant by far if you want to
keep the traditions up.

How many here know how to pass traffic properly?  Bet I can draw a line
in time.  And it had nothing to do with license class.  I was a tech at
```

the time. But I learned how to pass traffic, and how to be net control as part of the NTS. Because I had people on our local nets that enforced the rules. On checking in, out, and passing traffic. Traffic up into the system, and down to the final recipient.

That, my friends, was the difference. Not CW.

Wow! That answers a few questions. I've heard POI giving a GM4
a hard time on the bands. Must have been in nutcase mode at the
time. He'd better not try it with me !!

Oh, I think people think about them. They probably just don't talk
about
them as much.  You think I'm stuck to HF? Wanna come look at my
latest 144 yagi that is nearly as long as the f/b width of my house?
"30 ft boom"
Seems I just commented about rat shack UHF antennas yesterday if I
remember right.  I usually talk about what other people talk or ask
about..
To tell the truth, I'm about bored with the whole mess, and don't post
as
much about any kind of antennas as I used to. I've got so many sticks
in the fire
lately, ham radio is just one wee small area I mess with.  And I'm
getting more and
more bored with it every year.  I used to be able to do 55-60 wpm on CW
in the
late 80's.
But due to my lack of activity the past few years, I'm slipping down to
snail
pace CW. Now I can only do about 35-40 wpm, and it gets a bit slower
every
year.  If you want to talk about different topics, it's up to you to
start them.
We can't read your mind on the internet...
MK

Maybe the OP was thinking of the older IC-2A. One of the battery
packs for the 2A had a jack for connecting 12V to it, which allowed
you to run the radio off the battery while it was being charged.
Applying 12V directly to the radio (only possible by removing the
battery pack) would fry it.

The IC-02A could run off 12-15V directly through a jack in the top
plate.

It's not listed with the Shure discontinued products on their web site,
but send them an e-mail.  They are VERY good about providing specs on
old products.

At the risk of going off topic, I recall someone mentioning that the RS 2 meter portable had an issue almost the same. The jack at the top was "supposed" to be for "vehicular" power - but I heard horror stories of the radio suffering damage when used in just that fashion. IAnd I've seen first hand - a battery pack that got smoked using vehicular power. It almost caught the guy's car on fire since it was near "cloth". I haven't looked at either the radio or schematic for so long - I can't recall exactly what the make-up is. I have though - heard many tales of guys blowing out radios in a vehicle. Hell, our Fire Department Squad Truck radio went out twice in 3 months from similar issues. I'm not sure if they actually figured out the exact reason as yet - Motorola and the original installer were to look over the situation. Seems to me, we all need to take an extra step to prevent such things from happening, since we can't rely on the manufacturers to do so. Just my 2 cents.

OOPS! The 02AT is ok on 12V, the 2AT has a problem with above 9V.
Sorry for the confusion.

I had a 2AT battery pack catch fire when charging off of the car charger.
There was no fuse in the power cord, and a wire shorted inside the pack.
Poof! It ate the wires inside of the pack, and the power cord all the
way back to the lighter outlet. A fuse would have been a *really good thing*.

*********** REPLY SEPARATOR ***********

Speaking of leading to a good paying career, if you're going to learn a skill, how about learning typing instead of Morse? Get on RTTY or PSK31 or one of the other digital modes and develop a useful, saleable skill. There isn't an employer in the world today (except possibly the ARRL) who would be impressed that you know Morse, but lots would like it if you could type.

Bill, W6WRT

>At the risk of going off topic, I recall someone mentioning that the RS 2 meter portable had an issue almost the same. The jack at the top was "supposed" to be for "vehicular" power - but I heard horror stories of the radio suffering damage when used in just that fashion. IAnd I've seen first hand - a battery pack that got smoked using vehicular power. It almost caught the guy's car on fire since it was near "cloth". I haven't looked at either the radio or schematic for so long - I can't recall exactly what the make-up is. I have though - heard many tales of guys blowing out radios in a vehicle. Hell, our Fire Department Squad Truck radio went out twice in 3 months from similar issues. I'm not sure if they actually figured out the exact reason as yet - Motorola and the original installer were to look over the situation. Seems to me, we all need to take an extra step to prevent such things from happening, since we can't rely on the manufacturers to do so. Just my 2 cents.

It would not surprise me much if the failures were due to a "load dump" event.

If the alternator is running, and supplying a substantial amount of current to a load (e.g. headlights), and the load is suddenly disconnected (e.g. headlights turned off), it's not at all uncommon for a very impressive voltage spike to be generated. This is due to the same sort of inductive "kickback" which can occur when shutting off the drive current to a motor or relay or solenoid.

My recollection is that the standard used in the automotive industry, is that electronic devices on a "12-volt" automobile bus should be designed to survive load-dump spikes of up to 50 volts. A radio designed for 12 (or 13.8) volt operation, whose finals are fed fairly directly from the battery supply, may work just fine if the ignition is off, but could easily fail on its first load-dump event.

Some sort of fast-acting zener protection, followed by an RF choke, would probably be a good idea when connecting such radios to an automotive power system.

Unfortunately, a 50-volt load-dump spike could exceed the input-to-output voltage-differential limit of common regulators such as an LM317; hence, even if you're using a regulator of this sort to power a radio intended for 9 volts, you'll probably need an upstream zener to keep the regulator from popping.

...yes -- the only thing that's changed is that the little bar-graph
(along the bottom) doesn't appear; as though there were nothing to be
measured. And, I fell out of the repeater while in QSO (full-quieting),
having to sign clear on another radio.

> What usually happens, is the synthesizer quits, and it stops sending,
> or receiving.

...in my case, I can dial-up any repeater and listen -- I just can't
transmit any more.

> your car battery. ISTR that a short on the antenna is a third way.

...the jack on the top's supposed to have an internal regulator, and
I've used it in my truck on occasion since the radio was new with no
negative consequences (not like the HTX-202, which was made by Maxon
under license by Icom for Radio Schlock, and had issues with its
external power-jack).

Maybe infrequent long-winded transmissions over the last 22 years is the
culprit for the transmitter's untimely demise? (It's kept my hands warm
in the cool outdoors more than once.) I've long since misplaced (or
lost) the original manual, which had a schematic.

If I crack it open, I should be able to measure the voltages on the
device, itself to see if it's blown. Right now, the final seems like the
prime suspect. Thanx...

...Dave, N6BHU

Yeah, I've had a few experiences myself, in years past that taught me there's no such thing as too many fuses.

My glove-compartment has an assortment of fuses of varying vintages, all acquired for that "rainy day" that some times never comes.

If I remember properly, it was a LONG TIME AGO, didn't
Katashi Nose, KH6IJ, learn to copy RTTY at the Hawaii station?

He could certainly crank CW. He spoke at a meeting of the local radio
club in the mid 1950s [Yankee Radio Club, Salem Massachusetts]

Gosh, if I remember properly, I'm getting OLD. Now if I can find my driver's license I can figure out my birthday!

Hi Dave,

The I was thinking of the 2AT when I penned my response. The 02AT
is quite different. The synthesizer is more integrated, and there
aren't nearly as many crystals as in the 2AT. I am not certain what

the 02AT did for a final.

Assuming it is the same as the 2AT, it is a fairly simple job. You do need a high wattage soldering iron, so you can solder the transistor quickly. You should be able to make a few measurements, and determine if the final is popped.

-Chuck

Very (perhaps highly) plausible theory -- it's too bad that Icom didn't
learn from Motorola, and create an inexpensive (relatively to their
radio, anyway) vehicular charger for their radios (e.g. 'Convertacom'),
rather than a (potential) built-in self-destruct device.

ARRL threw principle out the window when they caved in to the demands of
the Lambda Amateur Radio Club (LARC). It was a sad day for me indeed when
I opened my beloved QST magazine and there on the pages were photos of
queers on a Tropical DXpedition, and in living color no less. The ARRL
wanted us to embrace a sick perverted lifestyle and be one big happy
family. To me, it was the spark that signaled the death of a once proud
organization, and it turned liberal.

RHF,
  My point was ...this time the FCC is NOT *eliminating* nor *Outlawing CW.
(as far as we know)
Spark *did* suck, but even so there were those that hated CW.

I'll bet you try to pass yourself off as a Christian.... I guess you never
really learned some of the most important lessons.
The first lesson is to treat *EVERYBODY* with the same courtisy and respect
that you expect from them.

Welcome to my killfile.

Yup. I also had a 3A and had to be careful about that.

I know the Icom batteries I bought with and for the 02AT had a resetting
thermal fuse inside, wired in series with the pack. I used those batteries
with the 3AT; don't know if they originally had different batteries.

Yep, but that doesn't help much when the circuitry fails between the connector
and the thermal fuse.  Besides, the thermal fuse would only open if the cells
in the pack got too hot... not the 24 gauge wire.

What I don't get is why we are forced to see
homosexuality in areas that have nothing to do with sex, such as the example
you mentioned.

Well, "SC" a.k.a. troll,

Cw, when it came along, was frowned uopn and was predicted to be the death of ham radio as well. Did you know that?

Modes currently around that full knowledge of is NOT required to get a licence (where complete knowledge of sending and receiving all the characters in Morse is a requirement):
AM, SSB, RTTY, PSK, Paclet, Amtor, APRS, satellite...basically everything else in Amateur Radio!

I said *full* knowledge. Do any of the tests require explanations of all five (or is it ten) methods (circuit types and how they function) of generating SSB or how to generate CW...or proper operating practice in all situations?

Do you know WHY knowledge of Morse was required in the first place?

I think there should be more on the tests on operating practices. I know some Techs who can do much of the above and make better hams that any old fart crying over the supposed loss of CW. I know Extras who couldn't copy code worth a darn, nor do much in the way of tech stuff...so? They're all friends.

Your fingers and eyes (or ears) aren't broke... so why aren't you out mentoring new hams? In the last two years, how many programs have you written for helping hams with things like blind hams controlling rigs or or audio tapes on radio operation have you recorded for blind hams or trips to help a blind ham erect an antenna, do a small project or program his radio or cables you've given to a new ham for his antenna or taken a blind ham to a hamfest... Why am *I* wasting my time with this...pfffvt

I'll save you the trouble, I'm a 60 year old, 20 WPM Extra and currently spend most of my ham time on 2 & 440 from the car during drive time on repeaters (much more omitted)!

I didn't have to learn code in the Navy (though I did happen to already know it)

Jerks are everywhere and I wonder why I wasted this time. Guess I just needed a little vent...sorry folks..time for lunch.
73, Steve, K9DCI

Answers to the above questions for me: 5, 4,0,1,10,3,1 - not astounding, nor bragging, just true.
If you can't Walk the Walk, don't talk garbage.
doofus troll...

We were somewhere around Barstow, on the edge of the desert, when the drugs began to take hold. I remember Silent Key <cw.h@m.bands> saying something like:

>When CW is lost, new hams will be just like CB'ers and SWL's, or some
>other lower life form of radio hobbiest. You name it.

Go back to playing with the dinosaurs.

hmm I knew that about AM and SSB but not CW do you happen to have a
reference for that? (might be useful)

Yep! I stand corrected!!
5330.5 KHz USB ONLY, Maximum band width 2.8 KHz. 50 watts ERPd max.
5346.5 KHz USB ONLY, Maximum band width 2.8 KHz. 50 watts ERPd max.
5366.5 KHz USB ONLY, Maximum band width 2.8 KHz. 50 watts ERPd max.
5371.5 KHz USB ONLY, Maximum band width 2.8 KHz. 50 watts ERPd max.
5403.5 KHz USB ONLY, Maximum band width 2.8 KHz. 50 watts ERPd max.

And, "I dare not call it a 'band'" either. Just 5 channels occupied by gentle men and gentle women, both genders, with manners.

I have three rigs that operate '60' meters. I've gotten to love that non-band.

I'm fearing it will be Eminent Domain ham radio style.

They'll see spectrum that they don't have the ability to use, because

there will be no requirement to have that ability. They will want the
spectrum for phone. One good thing, there are other modes besides CW that
need it, so maybe they won't take our CW portions and give it to phone
only hams and appliance operators.

Thank you.

In a way, it's sort of like sign-language. Two people that don't know
each others tongue but know sign language can still communicate.

Thank you for your service to America. It is people like you that make us
a great country. When hard work was needing to be done and learned you
were there.

Today people are lazy and that's why they want to get a license in as easy
a way as possible, even if it means the service and our ability to
communicate with each other suffers.

Call the FCC, email the ARRL. Tell them you don't want to see ham radio
dumbed down anymore, for the good of the service and the good of country.

God bless America. Amen

But it's the lower qualifications that will cause the service to suffer. I don't think new general class hams today have as much of a grasp on theory as new ones did 15 years ago. 15 years ago, they spent more time studying the theory while they were building their code speed up.

Loss of the requirement to be code proficient though could be offset if the passing score on written the exams were raised to 85%

Yes, but can you send and receive Code at 13 or 20wpm?

What if in an emergency your microphone broke, and the only thing you had
to save a life was CW?   With your skills, that person would die. In that
situation you'd be about as useful as two tin cans and a piece of string.

But we hope that won't happen though.

We already have CB for a codeless service. You want Ham radio to be like
CB?

Right, that's the service nature of hams. Hams helping hams, and hams serving the community. And Dumbing it down can effect the quality of service. Maybe it won't go totally to shit while you and I are still around, but it will happen. In Life, What happens when standards are lowered, things get better?

Come on Bill, I know you care more about ham radio than to just post the
meter.

what uis the need to do

their is no loss in ending the code requirement so why does anything
need to replace it

We were somewhere around Barstow, on the edge of the desert, when the
drugs began to take hold. I remember Signal Chaser <S@ve.cw.now> saying
something like:

why? the FCC has made up its mind just waiting fro the monemnt to enact
it with the least fuss

if you wanted to make a last find the CONGRES crtiter on the telcom
comittees but you need a reason to save sw testing first
the reason your side lost is they don't have areason that stands up for
imposing the restriction\
